**Contact : Mr. Ian Laverty, Aviation Marketing Manger**

MacDonald Dettwiler is one of Canada's leading aerospace systems engineering firms. The company's Aviation Systems group has delivered aeronautical information and air traffic control systems throughout the world since 1977. Customers include civil aviation authorities such as Transport Canada, the U.K. CAA, and the Australian CAA, airlines such as Canadian Airlines and Swissair, and military agencies such as the United States Air Force.

MacDonald Dettwiler is the main Canadian contractor on the new Canadian Automated Air Traffic System (CAATS), the world's most advanced flight data processing and airspace management system, now under development for Transport Canada. MacDonald Dettwiler is also delivering the world's most advanced automated Aeronautical Information Services (AIS) system to the Australian Civil Aviation Authority under the National Aeronautical Information Processing System (NAIPS) contract.

MacDonald Dettwiler's Vortex Meteorological Information Systems product line offers a wide range of aviation weather functions, including forecasting, air traffic control operations, pilot briefing, and processing and display of satellite imagery and weather radar.
