

~~xxxx~~ Germany firms do not do business that way).

Then the story is that Macdonald knew that a model was coming out from Germany as a sample, for stock. He wrote to the firm in Germany, over Berblinger's head, describing this big deal he had with the university and ordering a model shipped to Sir Arthur Currie, Principal.

Young said that they now find papers in Macdonald's desk to show that he intended to make a dummy requisition purporting to come from McGill. He said ~~he~~ had done the same sort of thing with the Lake Shore Mining Company, and others, and now had skipped the country.

Charlewood comes into the picture only last week. Miss Donnellan of our Employment Agency in the ordinary course of looking for jobs solicited Berblinger, and he said he wanted a McGill graduate to replace a man who had gone, and told her then, it was a funny story, and about Macdonald representing himself as a McGill graduate and not being one and having told him that Dean Brown was very friendly with him and used to pat him on the back and call him by his first name and so on. (Brown comes into it last week, when Young called with Berblinger to ask about Macdonald and of course he had never heard of such a man).

It may be all right, even so, why should you take the chance? If they were defrauded by Macdonald that's their own lookout and why should you help them out? Let the thing go back to Germany, they will only be out shipping charges and delay in getting another model. Models for scientific purposes come in duty free for the University but even if they are willing to pay the duty and take it over, they would still be left somehow with papers in your name which they could use fraudulently if they so desired? Then ~~ex~~ if they are not straight your position is that the thing has been imported in your name and has been harboured at McGill in our Engineering Building - ???
