"The unusual richness of the silver mines at Cobalt, near Lake Temiskaming, will be seen from the fact that for the nine months ending Sept. 30th, 1802 tons of ore were shipped, containing 2,400,000 oz. of silver, or an average of 1332 oz. per ton. The gross returns were lessened by reason of a considerable quantity of argentiferous gravel being shipped from the debris of the veins, but some of the carloads of ore taken from the veins in place netted \$25,000 and \$30,000 and even up to \$60,000. Some fifteen or sixteen properties are now producing ore, nearly all of it very rich."-Thomas W. Gibson, Superintendent Bureau of Mines, in The Engineering and Mining Journal, New York.

In recent years, research and experiment have proven that the best sulphur, for medicinal use is that obtained from Calcium (Calcium Sulphide), and sold in drug stores under the name of Stuart's Calcium Wafers. They are small chocolate coated pellets and contain the active medicinal principle of sulphur in a highly concentrated, effective form. Few people are aware of the value of this form of sulphur in restoring and maintaining bodily vigor and health; sulphur acts directly on the liver and excretory organs and purifies and enriches the blood by the prompt elimination of waste material.
