

FIG. 68. (Half Size).

This gracefully formed pipe-head is from the vicinity of Midland city and our thanks are due to Mr. H. F. Switzer for it.

FIG. 69. (Full Size).

The pipe, of which figure 69 is a cut, is of a very unusual pattern. So almost infinite is the variety of forms given to clay pipes that one cannot fail to be struck with the absence of conventionality that characterizes their make as compared with the production of many other articles. The remaining portion of the bowl in fig. 69 shows that even when complete its capacity was not very great.

The lower side of the under jaw is hollowed in close imitation of nature. The stem is four-sided, each angle being crenated. Another pipe in the museum (S. 110.) from the same neighborhood, has an animal head of similar shape and side-markings, (See Fig. 8. Rep. of Canadian Institute for 1889). Fig. 69 is from the Melville Farm Nottawasaga.
