

OUR FARMERS' CLUB Contributions Invited

PRINCE EDWARD ISLAND

KING'S CO. P. E. I.

CARDIGAN BRIDGE. Crops are looking fine. There are a few potatoes to plant yet, also turnips and late grain, such as buckwheat and barley. A recent frost killed a lot of apple blossoms. Early frost also hurt the clover, but it is coming on fine now. Prospects are for a good dairying summer.—H. P. O.

NOVA SCOTIA

KING'S CO. N. S.

WATERVILLE. The chief topic of interest seems to be the frost of June 5, which cut down early vegetables, such as beans, corn, cucumbers and potatoes. The latter will probably sprout up again, but they had already become bushy plants. The corn seems to be partially rotting. Other things will have to be replanted. Apples, cherries and cranberries, in some localities, have suffered severely; some people think that they have lost most of their fruit. The weather has been cold and damp with very heavy rains, which have been excellent for the hay crop. The weather has been good for most farm crops, which are doing well. The whole country looks fresh and green. Chickens and ducklings seem to be plentiful. Frosts have been reported from 25 to 30 in the western part of the county. Feed still continues high.—E. W.

ONTARIO

HASTINGS CO. ONT.

TURRIFF. After a somewhat backward spring we are having a regular weather. The grass crop is reported light in some cases. Clover, however, is doing well everywhere. Nearly all crops are looking well. The heavy rains did their share of damage. Besides washing out roads, they tore out or buried corn, potatoes, turnips, and garden vegetables. A great deal of new land has been cleared this spring and a much increased acreage now. There is considerable building going on. A preference is shown by the young people for Ontario.—W. R. W.

PETERBORO CO. ONT.

NORWOOD. Our cattle, especially the calves, are doing well. We have equities for five cows from men who have heavy orders last winter. I have nine acres of corn with not a miss—so much for good seed. The majority of the farmers who have been buying imported seed corn in bulk have had to plow it up as a very large part of it did not grow. I am glad to see the corn now and it is doing well. Crops and especially clover are very promising. Now seeding has made a record growth for this season of the year.—G. A. B.

ABSORBINE

Removes Bursar Enlargements, Rheumatism, Sprains, Bruises, Burns, Cuts, Blistered Feet, Swollen Feet, Corns, Bunions, Sprains, Strains, Stiff Joints, Neuralgia, Headaches, Toothache, Stomach Pain, Does not Blister, remove the hair by the use of the hair brush, delirious. Book 17 free. ABSORBINE, (mankind) or RHEUMATISM, Sprains, Gout, etc. Hydrocort. Allvars, Various Vases, W. F. THOMP. P.O. 123 Temple St., Springfield, Mass. U.S.A. and Canada Agents.

Studies in Horse Breeding

By G. L. Carlson

A life and a fortune have been spent in the investigations, and the collection of data from which this book is written. The information given in this book can be of inestimable value to anyone interested in the raising and handling of horses. It embodies such subjects as the selection of a stallion, care of the stallion, care of the brood mare, care of the foal, feeds and feeding, and many other subjects of interest. The book is profusely illustrated, printed on excellent paper, with cloth binding. Price \$2.00 postpaid.

Farm and Dairy, Peterboro

ONTARIO CO. ONT.

TAUNTON.—Clover hay will not be a heavy crop, as it is in bloom now and will soon be cut. The growth before the past week was very slow. Present conditions indicate good grain crops. Corn that was planted since the 24th of May, under favorable conditions, has made good growth. Most of the corn is still in the silo. Either road work, thinning mangels or preparing for turnips is the order of the day.—S. A. N.

SIMCOE CO. ONT.

STAYNER.—Farmers are wearing the "smile that won't come off" these days. Some get pretty "blue" when the cold, wet spring, continued week after week. But it is changed now that crops are growing like weeds, with every prospect of a magnificent crop. And the acreage about this place is unusually large. Spring grain is growing nicely. Peas in a few localities get too much water, but are recovering nicely. Hay and clover are heavy.—J. T.

WELLINGTON CO. ONT.

ELOHA.—The hot weather has made a wonderful comment in the various crops and has further deteriorated this as a peculiar season. Heat, the past week, but it has warmed up the soil and put the wire worm out of business for this season. The deprivations of this little wheat, show the necessity of a short rotation, as this is the only one that meadow that has been seeded down for some time is supposed to complete its life history in three years, and will then salt has little effect upon it after the early part of its first season. Some years ago the writer had a field which had been a long time in pasture. The second year after breaking it up it seemed fairly alive with wire worms. When the snow went away in spring the surface covered with the tiny tracks in the mud. A liberal dose of salt was applied. This prevented damage to the following crop.—G. W.

BRANT CO. ONT.

ST. GEORGE.—So far as the writer has heard, none of the farmers hereabout has been complaining of drought lately. Certain crops are suffering from lack of moisture on the ground, and on it, it is to satisfy even an Irishman fresh from his native bog, and that we need now is warmth, and probably that is the case in more than one in this neighborhood is above ground yet, but examination shows that it is coming, and soil and seed beds are ready for the hoe and sock, but will not be suitable as soon as the weather becomes suitable for killing weeds.—C. C. S.

MIDDLESEX CO. ONT.

LITTLEWOOD.—From many farmers one hears complaints about the work of the wire worms and grubs. In places the spring crops have been considerably thinned, and injury to the corn crop is fearful. A hot sun and a heavy dew kill a handful of ashes and salt into every hill of his six acres of corn to outfit the grub. He used one or two shovels of salt, three ashes, and three salt and two to the bush, and put it just on top of the corn. He placed some grubs in this mixture, and found them dead next morning. Fat is the best and most economical well, and a good crop of each is anticipated.—J. E. O.

PERTH CO. ONT.

ST. MARYS.—The weather for the past two months has been very cold and backward, and, although the seeding was finished early, the crops are not very far advanced. The ravages of the wire worm and the white grub have winter very well. A considerable area has been keenly felt. One enterprising farmer dropped a handful of ashes and salt into every hill of his six acres of corn to outfit the grub. He used one or two shovels of salt, three ashes, and three salt and two to the bush, and put it just on top of the corn. He placed some grubs in this mixture, and found them dead next morning. Fat is the best and most economical well, and a good crop of each is anticipated.—J. E. O.

LAMBTON CO. ONT.

WYOMING.—Grain crops are looking well. Wheat is the heaviest crop for years. Hay is a success. Wire worms have done some damage in the southern part of the county. Pastures are good, and stocks are fat. There has been a large acreage planted to corn, and

with a little more warm weather in bring on the corn crop every day points to a prosperous season.—D. N. A.

BRUCE CO. ONT.

HEPWORTH.—A large quantity of corn that was seeded last year, is very thin; old meadows look better. There is abundance of pasture. There have been more peas sown this year than for a number of years and they look very promising. Cows are milking well, as there have been no flies to bother them yet. Fat cattle are very scarce, as are also hogs. Young pigs are very hard to get. All spring crops that were not drowned out with the wet weather are looking very good, and with fine weather from now on they will be up to the average.—J. K. L.

HURON CO. ONT.

PORTERS HILL.—Up to a few days ago the weather has been very cold and wet, but now crops are beginning to look better. Wheat is doing fine. Hay is going to be short. Oats are promising. Some sections are badly infested with the white grub and the wire worm. The first is doing severe damage. It seems that more work should be given experimenting on these very destructive insects, and finding some easy means of destroying them. The apple crop, that looked very promising, has been ruined, and is suffering severely owing to the wet weather and heat. The latter turns the leaves a brown color, and in spots, but all over the leaf. It is doing much to lessen the vigor of the trees during the growing season. Several fruit meetings have been held throughout the country in the past three weeks.—R. E.

MUSKOKA CO. ONT.

GRAVENHURST.—With the warm weather after a cold spring, crops are looking fine. Clover and timothy are in hand. The root crop is coming on well. Flies are bad on turnips and similar crops. Pastures are splendid, and the cattle are doing well. Road making is the talk of the day.—B. L.

BRITISH COLUMBIA

NEW WESTMINSTER CO. B.C.

MUNBOE.—Crops are looking good. The weather is very changeable. Small fruits are in their prime. Haying will soon be started.—J. C.

GOSSIP

The premium list of the first Annual Fat Stock Show to be held at the Union Stock Yards, Toronto, on December 12th and 13th, 1910, offers liberal prizes. All stock exhibited is to be sold, the prizes awarded at auction, the others at either private sale or auction as the owners may desire. In this way comparisons can be made between the awards of the judges and the actual value of the stock to the butcher or packer. The premium list is issued early to give the buyers ample time to prepare their stock for the show.

HOLSTEIN-FRIESIAN NEWS

Farm and Dairy is the official organ of the Canadian Holstein-Friesian Association. Those who are readers of the paper. Members of the Association are invited to send items of interest to the editors for publication in this column.

The 35th annual meeting of the Holstein-Friesian Breeders' Association of America, the largest cattle breeders' club in the world, was held at Syracuse, N. Y., opening on Wednesday, June 1st. Charles W. Wood, president of the association, in his opening address, dealt upon the character of the membership, general progress and the work of the various departments of the association, directing attention to the great growth of membership and the need for registry. His recommendations were generally to continue along present lines. He advocated the sending of selective officers for periods of three years. The total number of members present was 36, representing 15 states. Accessions to the membership numbered 610,000 for prizes for butter records made under the advance registry system; \$10,000 for the membership of the association; \$4,500 for prizes at fairs and shows, and \$400 as a scholarship to be awarded at the students' judging contest. The report of the treasurer, W. R. Smith, showed a cash balance on hand of \$104,919.21. A rule was adopted prohibiting the

feeding of condiments and unusual feeds to cows under an R. O. test. A resolution was adopted condemning the pending legislation in Congress for reduction of the tax on oleomargarine. The report of the superintendent of agriculture, Malcolm H. Gardner, of Delaware, Wis., showed the acceptance of tests of 5,124 animals during the year, whose average yield of butter fat was 15.99 pounds per week, equivalent to 27 pounds of milk a day, and 16.13 pounds of fat per seven-day records of 54 pounds of fat. Yearly tests of 73 cows were reported.
