EATING BETWEEN MEALS
There is nothing that has so much to do with a child's health as what it eats and when and how it eats it. Many of the disorders of childhood can be traced directly to unsuitable food eating between meals and over-indulgence in sweets. One of the most injurious habits of childhood is eating between meals. Children are tempted to spend their pennies for candies, cakes, etc. They eat them between meals and so destroy their appetite for the regular meals.

Just how long a child will keep well under such conditions depends upon the care it receives in other respects; sooner or later its digestion will become impaired and it will have bad dreams, lose sleep and become thin and pale. It is such a child who soon becomes run down and is susceptible to colds and more serious contagious diseases.

W. Girdwood of Redbank. The next discussion will be held in October when Rev. W. M. Matthews will give a paper on The Church and the Social Order.

I am so well satisfied with the Tablets that I lose no opportunity in recommending them to other mothers." The Tablets are sold by medicine dealers or by mail at 25 cents a box from the Dr. Williams' Medicine Co., Brockville, Ont.
