STEEL SHIPBUILDERS, ENGINEERS, BOILERMAKERS.

TORONTO, CANADA.

DREDGES, - HYDRAULIC AND DIPPER.

OF ALL SIZES.

ENGINES and BOILERS, - - - Marine, Stationary and Hoisting.

The Injector Sand Blast Apparatus

PATENTED IN THE DOMINION
OF CANADA,

May 9, 1905. No. 93,054.

MANUFACTURED AND SOLD BY
CANADIAN RAND CO.
LIMITED.

Montreal, Que. Kenora, Ont.
Toronto, Ont. Rossland, B.C.
Halifax, N.S. Vancouver, B.C.

The MASON Reducing Valve

For Steam,
Water or Air.

Is designed to re-
duce and maintain
an even pressure
regardless of
changes in the
initial pressure.

It will automatically reduce boiler pressure for steam heating coils, dry rooms, paper making machinery, slashers, dye kettles, and all places where it is desirable to use a lower pressure than that of the boiler. Any low pressure desired may be obtained by simply turning key.

They are Reliable and Accurate.

A Standard Device for 20 Years

THE
Mason Regulator Co., Boston, Mass., U.S.A.

MILL and MINING MACHINERY

Shafting, Pulleys, Gearing, Hangers, Boilers, Engines, Steam Pumps, Chilled Car Wheels and Car-Castings. Brass and Iron Castings of every description. Light and Heavy Forgings.

Alex. Fleck, Vulcan Iron Works Ottawa

"THE TIME IS NOW."

It is a well known fact that many contracts for dams are deferred till late in the season. The owner usually says: "Low water comes from August to November," and therefore he postpones the actual placing of a contract until "low water." Then the signs of trouble commences.

New plant has to be ordered, and the cars to ship it in, and cars at that time are very hard to obtain.

Labor in the Autumn is invariably higher than in the Spring—hard to get at that, and when secured usually "skim milk."

As a result, by the time work is fairly under way the low water season is half gone. Fall rains threaten floods, days shorten, cold increases, extra expense is involved in heating material, the efficiency of labour is cut down, and the job is landed upon the winter in a half-finished condition, and has to be laid off till Spring, or is carried through at greatly increased cost.

Now we point out that in most dams half the work is done on dry land anyway, so that it can be commenced at any time. Rivers usually reach normal flow during June, and we emphasize the fact that the cost of handling a foot or so of extra water is trifling as compared with the aggregate of losses incurred by postponing work until cold weather.

The time to place your contract is NOW. Then we can deliberately perfect our plans and organization, get our plant and material on the ground, take our pick of the spring labour market at bottom prices, get our shore work well under way so that when low water does come we are ready for the low water work to the best advantage, all of which is good business for you.

We respectfully urge the above upon your consideration.
