

Sponsored by External Affairs and International Trade Canada, and organized by the Canadian Space Agency in cooperation with Canada's Centre for Remote Sensing of the Department of Energy, Mines and Resources Canada, this workshop will bring together approximately 20 Japanese and 30 Canadian scientists to examine recent research developments. The workshop will focus on two specialized areas: the microgravity element of the workshop will centre on fluid and combustion sciences in a microgravity environment; the earth observation element will examine potential applications for satellite data.
