								Tuesday before Easter.					

MARCH.—The *Boston Cultivator* gives a capital receipt, which we gladly copy for the use of our farmers. Thus Professor Johnson recommends for fertilizing purposes, to mix one bushel of salt and two bushels of dry lime under cover, and allow them to decompose gradually, thus forming chemical union. The mixture should be made nine weeks before use, or, still better, three months; turning over the heap occasionally. This salt and lime mixture when applied at the rate of 20 or 30 bushels to the acre, forms an excellent top-dressing for many crops. It acts powerfully on the vegetable matter of soils. Fifty-six bushels applied to turnips have produced as large a crop as barn-yard manure. It is destructive to grubs and insects in the soil. Like salt it attracts moisture, and is useful against drought.

Jacobs' Rheumatic Liquid cures Scratches on Horses.

A great Public Want fully met by Dr. Colby's Anti-Costive and Tonic Pills.
