THE EVENING TIMES AND STAR, ST. JOHN, N. B., THURSDAY, FEBRUARY 12, 1920

MATTERS IN THE NORTHERLAND

(New York Evening Post.)

A correspondent signing himself "W" and honored with display type writes to the London Times: "It is in Germany that Marxists are born; it is she who dispatched the deadly poison in the moment of her direct need; it is she who brought to naught Yudenitch's attempt to save Petrograd; it is Germany again who encouraged Petura and fostered anarchy in Denikin's rear, and above all it is she who keeps countless spies and agents in Soviet Russia, worthy accomplices of the scores of German staff officers who are so brilliantly carrying out Bolshevik strategy at the front. Without Germany Bolshevism would have collapsed long ago. But it suits her purpose to support it as long as it is opposed by any forces deriving their energy from Allied assistance. Her game is perfectly clear; so long as the Bolshevik hammer, which she wields so deftly, is powerful enough to crush under its blows every anti-German element in Russia, she will use it. Her faithful servants, the Bolsheviks, will see to it that every ingredient distasteful to her is carefully removed, so that the Russian cake may well into her lap properly prepared for her consumption. The devilish process is being carried out with cynical precision, and the day Bolshevism will have outworn itself in Germany's eyes she will drop it like a poisonous viper, careful at the same time to crush its unseemly head. But that day will be the day of Germany's triumph. Then, with her foot on prostrate Russia, will she cast a smiling glance at Versailles, the grave of her pre-war ambitions and the creator of her eastern power.

The Duke of Sutherland mentioned recently in the House of Lords that he still had estates in the Highlands extending to 300,000 acres. He has since applied to the Scottish courts for authority to disentail and sell nearly one-half of this territory. It is understood that he will ultimately retain only Durobin Castle, Loch Choire Lodge, and the House of Tongue, with its extensive forests of their respective domains. The Duke of Sutherland, with his estates, which once extended to about 300,000 acres, reduced to 300,000 acres, no longer has the largest landed property in the kingdom. Among the other great landowners, Lord Leverhulme, who has more than 300,000 acres, Lord Leverhulme has most.

"The most deplorable feature of the present situation," says London Truth, "is that the United States should have stood outside the fight, for peace. This is one of those cases which came under the rule 'least said, soonest mended'; but it is no accident. It may be a misfortune, but it may prove a misfortune for the New World as well as for the Old."

Speaking on aviation at King's College, London, Lord Montagu of Beaulieu said that before long he believed they would see the journey between London and Rome done in the hour of daylight, and between London and Cairo in a little over twenty-four hours. Great Britain was in some respects unfavorably situated in regard to aviation. Being at the extreme northwestern end of a great block of continuous land, comprising Europe, Asia and Africa, Great Britain could be used on the way to America, but would be a terminus so far as continental traffic was concerned. But there was included in the British Empire today the land of Egypt. Egypt was in a very favorable geographical position, and it was without fog, seldom had a strong wind, and sunshine was common there; there began to hate the sun. It was destined in many respects to be the center of continental aviation, and the western half of Africa, the whole of Europe and most of Asia. Whatever happened in the way of air development, Egypt in Egypt, it would be unwise to allow the aerodrome of Helopolis and the right of flying over Egypt to be in any other hands than those of the British Empire. Helopolis was a sort of Clapham Junction for aviation outside the American continent, Cairo, near which Helopolis was situated, was 2,200 miles from London, 5,000 miles from East Africa, 4,000 from Cape Town, 2,000 from Karachi via Akaba, and 5,000 from Cape Londonderry for Australia en route for New Zealand.

Here is one of the latest of Lord Fisher's explosions in the London Times: "Newton saw an apple fall and deduced gravitation. You and I might have seen millions of apples fall and only deduced pig-fodder. It's the same story about Bolshevism. We want some of those apples, Cromwell to enunciate that Bolshevism is the reaction from repressed freedom. Armenian and Georgian Republics are going to be suppressed and thus Bolshevism propagated by perpetuating Turkish misrule in Asia. England herself is not free, so Bolshevism rears its head. A threat to displace parliament makes it recalcitrant members feed out of the prime minister's hand. Did not some hundreds of them send a telegram to Paris? They can't save Armenia and Georgia if they want to. They don't represent the masses of this nation. It's the baldest, richest, greediest House of Commons we ever had. Look at the untrammelled, unparalleled, wanton swaggers in every department. And business men fettered by unbusiness fools. Immense tons of shipping now in our harbors waiting to be unloaded. Who loaded them?"

In a letter to the London Times Israel Zangwill says: "The Jewish masses, especially among orthodox, are extremely law-abiding. It is precisely because they are law-abiding that they have been forced into Bolshevism with the rest of the Russian population. Indeed, what alternative had they save starvation, execution or flight? If they seem to provide an undue number of commissaries, it is simply the result of their superior education and aptitude for affairs; the rest of the Russian population is largely analphabetic.

If, nevertheless, there is a certain evolutionary ferment in the world traceable to Jewish origin, it is due partly to the immemorial Hebrew aspiration for justice, partly to the over-wandering, free-thinking Jews, uprooted in soul as in body by pogroms and with no fix anchorage for their idealism. This is the world's share in the Jewish problem. It was thought the Allies had offered a solution to it by the restoration of Palestine to my unhappy race—Palestine, where the year's statistics failed to record a single crime among the Jewish inhabitants. Alas! the much-trumpeted prospect turns out a mirage. What is now being concocted in Paris is a scheme without attraction save for mere refugees, a scheme of which Jewish savior Jew returning to Palestine would and himself under British military rule.

WARD OFF INFLUENZA BY KEEPING IN BEST PHYSICAL CONDITION

Persons Who Catch Cold Easily and Who Are Weak and Run Down Are Earliest Victims

Danger is Too Great To Take Any Chances

Build Up Your Bodily Powers or Resistance by Taking Tanlac and Fortify Against Attack.

Much of the difficulty experienced by health authorities in checking the spread of influenza lies in the fact that it spreads with almost lightning rapidity. Although state and city authorities have succeeded in keeping it under control in some sections, the disease has gotten entirely beyond control in others.

It is universally agreed by all well-informed persons that the surest preventive is to get the system into the best possible physical condition, in order to be able to throw off the infection. It has been stated that it is possible to perfect the powers of human resistance so that it can throw off almost any infection, not excepting Spanish influenza, which is generally supposed to be one of the most contagious diseases known.

Medical authorities agree that people who are weak and run-down are the earliest victims of the influenza epidemic. If you find yourself weak and losing flesh, or if you are in a generally run-down

condition you are really in danger if you should come in contact with the influenza germ. As a powerful re-constructive tonic and system builder Tanlac is without an equal. This is a statement of fact, and is fully supported by recognized authorities. According to all accepted reference works, including the U. S. Dispensary, Encyclopedia Britanica, and the leading text-books used in the schools of medicine, the principal ingredients of Tanlac possess the most powerful re-constructive properties known to science. This statement is further proven by the fact that Tanlac has been tested by its extraordinary power to restore health and strength to the weak and run-down system by enabling every organ of the body to perform its proper function in the way nature intended. It creates a good, healthy appetite for wholesome, nourishing food, and is an ideal strengthening tonic for persons who are in a run-down condition and who are suffering from the after-effects of hard winter colds, grippe, or bronchial troubles.

Irrefutable evidence of the re-constructive powers of Tanlac is shown by the fact that it was used by tens of thousands during last year's epidemic with splendid results. One well-known Texas physician stated that he had never found anything to equal Tanlac for building up his patients who had had influenza, and that he had treated over fourteen hundred cases in one month.

In connection with the Tanlac Treatment, keep the bowels open by taking Tanlac's laxative Tablets, samples of which are enclosed with every bottle of Tanlac.

Tanlac is sold in St. John by the Ross Drug Company and F. W. Munro, under the personal direction of a special Tanlac representative, James E. O'Donnell, Dip. per Harbor, W. S. R. Justison, Penn. per Harbor, R. O'Leary, Richibucto; W. H. Kirkpatrick, Ennisville; St. John, Ad.

aggravated by an Arab majority in civil life. Sidney Kidman, known as the Australian Cattle King, said recently in a London interview, "I have just come from America, and I had thought of buying a ranch over there, but after seeing the land and the conditions I have come to the conclusion that I would sooner attack Australia. America can't afford to have a large number of our animals are out in the open all the year round. We haven't to grow crops for our stock. The grazing is all that they need, and that is where the trouble lies. We want men to help going ahead if we can get the right type of immigrant. We want men ready to lead a rough but healthy and well-paid life, who will stick to the open and not hanker after the towns. One difficulty we have at present is that there is a tendency to stay in the towns instead of going out on to the land. Millions of acres of virgin land are awaiting development, and if a man has a little money he can hardly go wrong. It is unfortunate that at present the Labor government in Queensland is not doing much to encourage immigration. When I was in England ten years ago I took back with me about forty men, some of them omnibus drivers, some hotel employees, and practically every one of them did well. We must increase our present population."

Lord Ashfield (Sir Albert Stanley) in discussing London traffic problems the other day at the American Luncheon Club, said that in March of last year only 200,000 motor cars were registered in England and Wales, while in New York alone there were 300,000. If London were to have something like the same proportion of cars to population as New York City had, somebody would have to provide roads capable of dealing with 375,000 cars in London.

Lord Ashfield said that the number of cars registered in England and Wales in the early part of last year. He would like to prophesy how this great traffic problem was to be solved, but he ventured to make two predictions. One was that a rapid increasing number of underground railways would have to be built into London, railways capable of dealing not only with urban traffic but of transporting people living in the more remote districts in and out of the city in a much shorter space of time than was taken at present. His second suggestion was that, in addition, it would be found necessary to construct in London vast underground roads to be devoted exclusively to the use of fast motor traffic, and to be connected, in the outer districts, with what might be described as boulevard used for motor traffic only. That might sound visionary; certainly it would be costly; but if they were faced with the problem, it did not seem fanciful.

Another interesting feature of the present situation is that the United States should have stood outside the fight, for peace. This is one of those cases which came under the rule 'least said, soonest mended'; but it is no accident. It may be a misfortune, but it may prove a misfortune for the New World as well as for the Old."

Speaking on aviation at King's College, London, Lord Montagu of Beaulieu said that before long he believed they would see the journey between London and Rome done in the hour of daylight, and between London and Cairo in a little over twenty-four hours. Great Britain was in some respects unfavorably situated in regard to aviation. Being at the extreme northwestern end of a great block of continuous land, comprising Europe, Asia and Africa, Great Britain could be used on the way to America, but would be a terminus so far as continental traffic was concerned. But there was included in the British Empire today the land of Egypt. Egypt was in a very favorable geographical position, and it was without fog, seldom had a strong wind, and sunshine was common there; there began to hate the sun. It was destined in many respects to be the center of continental aviation, and the western half of Africa, the whole of Europe and most of Asia. Whatever happened in the way of air development, Egypt in Egypt, it would be unwise to allow the aerodrome of Helopolis and the right of flying over Egypt to be in any other hands than those of the British Empire. Helopolis was a sort of Clapham Junction for aviation outside the American continent, Cairo, near which Helopolis was situated, was 2,200 miles from London, 5,000 miles from East Africa, 4,000 from Cape Town, 2,000 from Karachi via Akaba, and 5,000 from Cape Londonderry for Australia en route for New Zealand.

Here is one of the latest of Lord Fisher's explosions in the London Times: "Newton saw an apple fall and deduced gravitation. You and I might have seen millions of apples fall and only deduced pig-fodder. It's the same story about Bolshevism. We want some of those apples, Cromwell to enunciate that Bolshevism is the reaction from repressed freedom. Armenian and Georgian Republics are going to be suppressed and thus Bolshevism propagated by perpetuating Turkish misrule in Asia. England herself is not free, so Bolshevism rears its head. Alas! the much-trumpeted prospect turns out a mirage. What is now being concocted in Paris is a scheme without attraction save for mere refugees, a scheme of which Jewish savior Jew returning to Palestine would and himself under British military rule.

SKIRTS KNEE HIGH, BUT NOT ALL

Conservatism at Intervals in New York's Opening Fashion Show—Backs Covered or Uncovered, Necks High or Low.

(New York Times.)

What are the styles for the coming season? That is a question that has kept women-kind guessing ages before this, but probably it has not been such a complicated problem as it is today. The deep reason for all of the doubt and questioning lies in the fact that Paris and New York are still competing violently for leadership in the world. That fact accounts for the National Retail Garment Association's fashion show, held in New York last week to lay down the law, as it were, about the spring fashions should be from a truly and sincerely American standpoint. The result would suit the most fastidious, for among all the gowns and suits and wraps there could be selected some to please the taste of every one.

As for Paris and whether she will outstrip this, our first organized attempt to lay down the law, the matter, we shall have to wait for judgment until we have had an opportunity to see upon her output. The American exhibit was held at the very same time the Paris openings were being conducted, and if our new fashions are to be anything like these, we have every reason to offer up a prayer of thanks, or not, which, while not in the least hiding the lower extremities, did succeed in drawing an illustrious green before them, forming at least a sort of suggestion of modesty.

The necks of the evening gowns were of all sorts, so that one is relieved from the responsibility of saying that this or that was the fashion. A slighter thing, there were gowns which had no backs at all, merely a slender string of beads to catch them in front and hold them around the neck. There was one on this order made of a handsome piece of black and white striped tulle, which was fastened in the back by a single button. The designer could achieve. Two tulle skirts were attached to the bodice, and they were lined with cloth of gold. Otherwise there was no ornamentation except the necessary string of black cut beads to hold the gown in place—or at least to seem to do so.

An evening gown, headed a tulle, was made over a silk foundation of the same hue. The only diversion in this silhouette was a horizontal line over the hips. Otherwise the frock was entirely of one color and tone, and it was fastened in the back by a single button. Another frock for evening wear, though quite low at the back, was made of the same material, and it was fastened in the back by a single button. A tulle skirt was attached to the bodice, and they were lined with cloth of gold. Otherwise there was no ornamentation except the necessary string of black cut beads to hold the gown in place—or at least to seem to do so.

Drink Coffee

If It Causes Indigestion, a Couple of Stuart's Dyspepsia Tablets Will Promptly Give Relief.

Indigestion caused by coffee is the same as indigestion caused by anything else. If eating food or drinking coffee makes you dyspeptic, all you need is Stuart's Dyspepsia Tablets, because they act with an alkaline effect which is just what the stomach does in health.

"I Surely Do Enjoy My Coffee! I'm Not Afraid to Drink It. Either, for I Have a Box of Stuart's Dyspepsia Tablets."

Stuart's Dyspepsia Tablets mix with the food you eat. The stomach by its peristaltic action churns and moves the food around the stomach walls, and the powerful ingredients in these tablets instantly begin digesting the food as they are forced through it and around it.

The use of one of these tablets after meals will in a very short time correct the faults of digestion and you will enjoy your coffee and food without the least distress or indigestion.

Every drug store carries Stuart's Dyspepsia Tablets. Price, 50 cents.

attached to the outside of the sleeve cuffs. With the suit was worn an artistically tipped hat of a shade of dark brown, which accented the costume in such a way that it became irresistible. Some of the evening gowns had skirts as short as any French one sent across the water to shock our American conservatism, but they were generally relieved and veiled by a layer of chiffon or net, which, while not in the least hiding the lower extremities, did succeed in drawing an illustrious green before them, forming at least a sort of suggestion of modesty.

Old Folks' Coughs, Catarrh, Bronchitis Quickly Cured!

This Tells of a Method That Cures Without Using Drugs.

Elderly people take cold easily. Usually the young folks, they recover slowly. That is why so many people past middle life die of pneumonia.

Cough Syrup seldom does much good because they upset digestion. Any doctor knows that a much more effective treatment is "CATARRHOZONE," which heals and soothes the irritated surfaces of the throat.

In using Catarrhozone you do not take medicine into the stomach—you simply breathe into the throat, nose and lungs, rich, pleasurable vapor, so full of healing power that colds, catarrh and bronchitis disappear almost instantly. The germ-killing balsamic vapor mixes with the breath, descends through the throat, down the bronchial tubes, and reaches the deepest air cells in the lungs. All parts are soothed with rich, pleasurable vapor, so full of healing power that colds, catarrh and bronchitis disappear almost instantly.

A Catarrhozone inhaler in your pocket or purse enables you to stop a cold with a bearing plaid pattern of roughly woven silk, and supplies treatment for two months, small size, 50c; trial size, 25c; all stores carry it. Write for literature to Catarrhozone Co., Kingston, Canada.

to be beautiful, must be narrow. The minute it is narrow enough it seriously interferes with the free movement of the limbs if a great deal of walking or any fast walking is necessary. Well, the trousers do away with this difficulty, they allow free motion without the slightest interruption, and at the same time they look precisely like a really truly undershirt when the overskirt is made discreetly long as it is in these new gowns.

A conservative model was made of blue serge with trousers for the underneath portion and an overskirt made of the same blue serge embroidered with all of its surface in a copper-colored silk. There was another example of this style made of a material of roughly woven silk, and it was worn a short blue serge cap lined with the same color of silk. This style was made of a material of roughly woven silk, and it was worn a short blue serge cap lined with the same color of silk. This style was made of a material of roughly woven silk, and it was worn a short blue serge cap lined with the same color of silk.

Some of the negligee shown at the exhibit were wonderful to behold. It would seem that in this country we are developing quite a specialized taste for gowns of this sort to be worn in the home. One achievement was carried out in color of bright chiffon. If the colors had been taken singly, they would have been termed crude and garish, but in the cleverness of their combination they looked like a single piece of material, though they had been of the faintest possible tints instead of the most glaring ones that could be chosen. It took a real artist to accomplish this, but it had been effected in a real way. There was no mistake about the success of the garment.

Another bluish chiffon negligee had puff pinnas for its foundation. They were ruffled at the feet and trimmed with rows of golden edging, which were the overjacket and the overskirt.

ASK YOUR NEIGHBOUR

It has been said that there is now hardly a city, town or village in the country wherein some woman does not reside who has found health in that good old-fashioned remedy, Lydia E. Pinkham's Vegetable Compound. Therefore, if you are suffering from some ailment, and hardly know what to do for it, and have tried other remedies without help, ask your neighbor if she has taken Lydia E. Pinkham's Vegetable Compound. If she herself has never had the need for it, undoubtedly she knows of others who have just the condition and who have been restored to health by its use.

Lose Your Fat, Keep Your Health

Superfluous flesh is not healthy, neither is it healthy to diet or exercise too much for its removal. The simplest method for losing extra flesh is to take Marmola's Marmola Method, tried and endorsed by thousands. Marmola's Prescription, containing exact doses of the famous prescription, are sold by druggists at 50 cents for a large case, or if you prefer you can obtain them by sending direct to the Marmola Company, 884 Woodward Ave., Detroit, Mich. They are harmless and leave no wrinkles or flabbiness. They are popular because effective and convenient.

CATARRAL DEAFNESS MAY BE OVERCOME

If you have Catarrhal Deafness or are even just a little hard of hearing or have noises go to your ears, get 1 ounce of Parmitin (double strength), and add to it 1/2 pint of hot water and a little granulated sugar. Take 1 tablespoonful four times a day.

This will often bring quick relief from the distressing head noises. Clogged nostrils should open, breathing become easy, and the mucus stop dropping into the throat. It is easy to prepare, costs little and is pleasant to take. Anyone aching hearing or having Catarrhal Deafness or head noises should give this prescription a trial.

To Keep Your Skin Free From Hairs

(Beauty Topics.)

If you are willing to spend a few minutes time in your room using a delicate paste, you can easily banish any ugly, hairy growth without discomfort or injury. The paste is made by mixing some water with a little powdered delicate. This is then spread over the hairy surface and after about two minutes rubbed off and the skin washed. You will not be disappointed with this treatment, providing you get real delicate.

LABOR WOULD BE CAPITALIST

(New York Commercial.)

Warren S. Stone, grand chief of the Brotherhood of Locomotive Engineers, is quoted as saying that labor in Cleveland is considering the withdrawal of \$400,000,000 in bank deposits with which to start a co-operative bank. Mr. Stone believes the \$400,000,000 "might just as well work for labor as to work for capital," and he expects the institution will be a reality before the year is over.

This is a rather interesting phase of progress in labor thought, and certainly it is not essentially new. A labor bank, especially one with so much capital, would take on the form of an investment that must attract world-wide attention. Co-operative agencies are not new, indeed in many parts of the Russian Empire they are conducted on a successfully extensive scale.

What Mr. Stone talks of is to be essentially a class institution. If the thing is seriously attempted, the most pregnant suggestion at hand is that it would discover what a task confronts all of capital's undertakings. The very thing which labor leaders have combated would be taken bodily into the lap of unionism, for unionism would become a parent of capital. If the experiment is tried, labor probably will learn to have a larger and more generous sympathy for capital, which has made it possible for labor to exist, a fact to which labor always has been blind.

Thus, a \$400,000,000 labor bank should turn out to be a long-needed lesson in economics.

MEAT CAUSE OF KIDNEY TROUBLE

Take a Glass of Sals if Your Back Hurts or Bladder Bothers—Meat Forms Uric Acid.

If you must have your meat every day, eat it, but flush your kidneys with Sals occasionally. Says a noted authority, who tells us that meat forms uric acid, which almost paralyzes the kidneys in their efforts to expel it from the blood. They become sluggish and weaken, then you suffer with a dull misery in the kidney region, sharp pains in the back or stiff headache, dizziness, your stomach sour, tongue is coated and when the weather is bad you have rheumatic twinges. The urine gets cloudy, full of sediment, the channels often get sore and irritated, obliging you to seek relief two or three times during the night. To neutralize these irritating acids, to cleanse the kidneys and flush off the body's urinous waste get four ounces of Jad Salts from any pharmacy here; take a tablespoonful in a glass of water before breakfast for a few days and your kidneys will then act fine. This famous Sals is made from the acid of grapes and lemon juice, combined with lithia, and has been used for generations to flush and stimulate sluggish kidneys, to neutralize the acids in urine, so it no longer irritates, thus ending bladder weakness.

Jad Salts is inexpensive; cannot injure, and makes a delightful effervescent lithia-water drink.

Cured His RUPTURE

I was badly ruptured while lifting a trunk several years ago. Doctors and surgery were of no use. I was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned, although I am doing hard work as a carpenter. There was no operation, no loss of time, no trouble. I have nothing to sell, but with a good will I would like to tell you any find a complete cure without operation, if you write to me, Eugene M. Mearns, 85 F. Marcellus street, Massachussetts, N. Y. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of rupture and the worry and danger of an operation.

Good-bye, Cold on the Chest! Here's Thermogene!!

QUICKLY come—quickly come! That's the Thermogene principle. With the aid of this wonderful curative wadding you can rust a cold just as suddenly as it attacks.

SIMPLY apply Thermogene to the affected part to-night, for instance. By morning the trouble has vanished!

THERMOGENE CURATIVE WADDING (Vandenbroeck's Process)

It's a wonderful advance over the old-fashioned, messy, uncomfortable poultice or plaster. Thermogene is a soothing, comforting warmth that goes straight to the source of the pain—gives instant relief—and continues its good work till a cure is complete. It's a wonderful advance over the old-fashioned, messy, uncomfortable poultice or plaster. Thermogene is a soothing, comforting warmth that goes straight to the source of the pain—gives instant relief—and continues its good work till a cure is complete.
