STRANGE PATHS THEY CHOOSE IN EFFORT TO GET SUBSISTENCE.

Try to Prove Themselves as Much Man' Equal in Laborious as Well as Mental Work-London County Council's Tutile Effort to Interest Parliament-Some Truthful Figures Concerning Preminent Workers.

These are unhappy times for the women's rights movement in London.
Although a committee has recommended the London County Council to petition Parliament to take steps for enabling women to sit on County Councils, and although the Council will probably adopt the recommenda-tion, it is very unlikely that Parlia-ment will take any notice of the

appear.

If it depended on the County Council, the battle of the women would be won. Every Council since the body came into existence has petitioned Parliament in the interest of women members, and Parliament has steadfastly ignored the appeal.

"That may be," said his host, "but it It will, indeed, be in the memory of all Londoners that three ladies— two elected by the ratepayers and one selected as an alderman by the is pleasant and innocent."
"So is a daisy," rejoined Lamb, "but
I don't therefore like daisy pie." Council—did actually serve on the first L. C. C., until the judges deterdaisy pies?" said some one at the table.
"My authority is Shakespeare," Lamb mined that they had no right to be

For the last five years women have lost, and lost heavily, in their cause.

Not long ago they could serve as
guardians, as members of the guardians, as members of the School Board, as parish and district councillors, and as members of the London vestries.

There are no London vestries now,

and women cannot sit on the bor-ough Councils which have superseded them.

Woman's Choice.

The work of the School Board o be transferred to the County Council, and on that body wome cannot sit. And only a little while ago Mr. Long hinted that the administration of the Poor Law will also be transferred to the municipal authorities, from which women

It is pointed out, as if women ought to be elated thereby, that the Education Act makes it compulsory that each scheme shall provide for the inclusion of women as well as men among the members of the education committee.

In conjunction with these circumstances it is interesting to notice the incursion of women into occupations sually connected with men. with the census of 1901.

There are female cellarmen, female

boatmen, female watchmen, and fe male warehousemen, not to mention female pointsmen and female railway porters, female bell-hangers, blackboilermakers, bricklayers assons, miners, carpenters, paper, angers, whitewashers, gasfitters, ock laborers, saddlers, sawyers, appherds, tailors, tanners, and unnasons, hangers. dertakers.

Truthful Figures. The returns show that in England and Wales, females find employment as follows: 6 architects, 2 account-ants, 86 auctioneers, 19,223 book-binders, 39 bailins, 46,769 bakers, binders, 39 bailifs, 46,769 bakers, 362 bargemen, 27,707 barmen, 6 bayonetmakers, 1,042 bedsteadmakers, 2 bell-hangers, 56 bill discounters, 316 blacksmiths, 420 boatmen, 4 boilermakers, 43,775 bootmakers, 4 boilermakers, 43,775 bootmakers, 4,298 brass-workers, 3,071 brick-makers, 4 bricklayers, 177 builders, 3,856 butchers, 757 cabinetmakers, 660 carmen, 56 carpenters, 132 coachmakers, 1,316 cellarmen, 1,911 chainmakers, 3,105 chemists, 54 chimney-sweepers, 72,046 clerks, 1,746 clockmakers, 30 coopers, 6 copper miners, 5,743 curriers, 2,527 cutters, 2,929 cycle-makers, 186 decembers, 2,929 cycle-makers, 186 decembers, 186 d per miners, 5,743 curriers, 2,527 cutters, 2,929 cycle-makers, 186 de-corators, 1 dock laborer, 212 doc-tors, 140 dentists, 608 fish curers, tors, 140 dentists, 608 fish curers, 166 fishermen, 4,325 French polishers, 7 gasfitters, 305 general laborers, 866 glue makers, 5,170 goldsmiths, 188 gunsmiths, 5,140 gardeners, 1,745 hairdressets, 4 hurdleso that woman is practically delivered from the pain and misery which eat up ten years of her life-between the ages, of fifteen and forty-five. makers, 399 ironfounders, 15 lead miners, 11 limeburners, 42 masons, 4,991 messengers, 211 metal machinsts, 3 millwrights, 2,604 nailmakers 1,702 packing-case makers, 99 paper-hangers, 9,693 printers, 115 plum-bers, 3 plasterers, 745 porters (rail-way), 3,239 ropemakers, 1 road laborer, 4,730 saddlers, 155 sawmakers, 10 sawyers, 12 shepherds, 3 slaters, 3 slauphterers, 222 stovemakers, 117,640 tailors, 71 tanners. -The strong eat well, sleep well, look well. The weak don't. Hood's Sarsaparilla makes the weak strong. 279 undertakers, 3 veterinary sur-geons, 1,101 warehousemen, 79 wheel-wrights, 1 woodman, 8 zinc workers. The Grand Trunk is the most convenient and up-to-date service to the west. Tickets will be on sale good going Sept. 24th, 25th and 26th at single fare for round trip to Port Huron, Detroit, Saginaw, Bay City, Grand Rapids, Chicago, Cleveland, Columbus, Cincinnati, Dayton, Indianapolis, \$28.40 to St. Paul or Minneapolis. Valid returning on or before October 12th. For tickets and all information call at Grand Trunk city ticket office, 115 King street, or depot ticket office. 'omen of rights in the capacity of a public representative, her sphere of employment has increased to a re-markable extent.

From Cadet to Admiral.

Particulars have recently been published throwing light upon the service careers of certain youths who entered the "Britannia" in the same term many years ago. Thirty-five of them joined, and of these six reached flag rank, and are now admirals. The proportion of one in five may be The proportion of one in five may b regarded as very high, and it would be intersting to have a comparison with the entries and promotion resuits in other years at intervals. These particular cadets might have done still better, if four of them had not died, and one been murdered, before donning the second stripe. Six of them left the service also in these junior stages and one was discharged, so that only twenty-three entered the running as lieutenants, and of these more than one in four reached flag rank.—Liverpool Post.

HAIR GROWTH

Promoted by Shampoos of Cuticura Soap

And Dressings of Cuticura the Great Skin Cure

Purest, Sweetest, Most Effective Remedies for Skin, Scalp and Hair.

This treatment at once stops falling hair, removes crusts, scales and dandruff, destroys hair parasites, soothes irritated, itching surfaces, stimulates the hair follicles, loosens the scalp skin. supplies the roots with energy and nourishment, and makes the hair grow upon a sweet, wholesome, healthy scalp when all else fails. Millions of women now rely on Cuti-

cura Soap assisted by Cuticura Ointment, the great skin cure, for preserving, purifying and beautifying the skin, for cleansing the scalp of crusts, scales and dandruff, and the stopping of falling hair, for softening, whitening and nair, for softening, withching and soothing red, rough and sore hands, for baby rashes, itchings and chafings, for annoying irritations, or too free or offensive perspiration, for ulcerative weaknesses, and many sanative, antiseptic purposes which readily suggest themselves, as well as for all the pur-

poses of the toilet and nursery.
Cuticura remedies are the standard skin cures and humour remedies of the world. Bathe the affected parts with hot water and Cuticura Soap, to cleanse the surface of crusts and scales and soften surface of crusts and scales and solven the thickened cuticle. Dry, without hard rubbing, and apply Cuticurs Oint-ment freely, to allay itching, irritation and infammation, and soothe and heal, and, lastly, in the severer forms, take Cuticura Resolvent, to cool and cleans Cutterra Resolvent, to cool and carase the blood. A single set is often sufficient to cure the most torturing, d.s-figuring skin, scalp and blood humours, from pimples to scrofula, from infancy to age, when all else fails.

Polonium, the Latest Scientific Sensation.

The wonder of radium is still before us; and now up comes a
new element—at least new from
the newspaper standpoint. As a
matter of fact, says "Current Literature,"
it is quite as old as radium, having been
discovered almost at the same time and
by the same persons—Professor and
Madame Curle. Like radium, it is a constituent of pitchblende and has many
characteristics similar to that element.

Madame Curie. Like radium, it is a constituent of pitchblende and has many characteristics similar to that element. The cause of the present interest in polonium is due largely to certain experiments recently conducted by Prof. W. Markwald before the Chemical Congress at Berlin. Since then the papers have been taken up with articles making all manner of claims for the new element, the most persistent of which is that it will cure blindness. Concerning this element "Electricity" says:—

Scientists as yet understand too little of the marvelous properties of this new element to venture more than vague predictions of what spheres of future usefulness it may fill, but it is not improbable that it may be found to perform the present functions of the so-called Roentgen or X-rays far more powerfully and without the somewhat cumbrous apparatus now essential to their use. In a much higher degree even than radium it possesses the property of shining in the dark, and although it is known that actual particles infinitesimally small are being shot out from it continually—a fact which is proved by magnetic experiments—this strange substance does not seem to exhaust itself nor to lose its luminous power with the passage of time. Here, therefore, is a magnetic experiments—this strange substance does not seem to exhaust itself nor to lose its luminous power with the passage of time. Here, therefore, is a nint, at least, of the future possibility of a constant and brilliant illuminant generated without heat or combustion.

Polonium is more valuable than radium, and Professor Curie himself, who

adium, and Professor Curie himself, who has a chemically pure specimen of radium not larger than a buckshot and weighing less than half a grain, would not sell it for \$20,000.

At the meeting in Berlin, Professor Markwald exhibited a bit of polonium weighing 15-100 of a grain, which was produced from two tons of uranium at a cost of \$75. He then proceeded to give a marvelous exhibition of the powers of his speck of polonium. It intercepted a strong current of electricity passing through the air from the generator to the receiver, the air ceasing to be a conductor for the flashes. The room was then darkened, and pieces of barium platinum, and zinc-blende, placed near the polonium, glowed with a bright greenish light. There is no doubt that the discovery of polonium is a most valuable one, although no one can say as yet how it can be adapted to practical use.

Better swallow your good jest than lose your good friend.

TEND TO DIMINISH STORMS. Electric Overhead Wires Dissipate Viclence of Lightning.

It is agreeable to be able to dissipate the idea which persons unac-quainted with the ways of thunder-storms and of earthly electrical systems have lately been entertaining that the municipality of electrical wires is causing an increase in the number of storms says an English change. The tendency is just the

other way.

According to the simple explanation which Dr. Sowerby Wallis, the rainfall expert of Cambden Square, gave the reason is this:—The disruptive explosion in a thunderstorm is an effort on the part of nature to adjust the distribution of electricity between earth and sky. But just as a lightning conductor provides an easy passage for the electricity from sky to earth, so every bare wire acts

sky to earth, so every bare wire acts as a conductor and helps dissipate the aerial electricity which would otherwise cause thunder.

The influence of the wires in London Dr. Wallis said, is very perceptible, so that with the ever extending system of telegraphs, telephones, and other electric works thunderstorms should show a tendency to decrease. But as to whether there are more or fewer storms than there were a few years ago Dr. Wallis pointed out that the question arises: What is a thunderstorm? Are one clap of thunderstorm? Are one clap of thunder and one flash of lightning a storm? The meteorological method is to measure the rain, as heavy rain a notable feature of thunder-

"There occur in an irregular manner," said Dr. Wallis, "groups of years with and groups with a marked absence of them. As far as I know, this cannot be ascribed to any specific cause. Storms are less frequent over towns than in the country, as the chimneys and steeples tend to premot electrical evolutions." vent electrical explosions.

DRINK AND LUNACY. Much of Latter Caused by Adulteration of the Former.

In 1859 there was one insane per on to every 536 same individuals. The average has since risen until now one person in every 299 is mentally afflicted. "What is the reason of this?" ask

"What is the reason of this?" asked Professor H. W. White, in delivering his presidential address to the
members of the Medico-Psychological
Association, at London, England.
One cause was the fact that fewer
eligible aliens settled in the country
and intermarried with our people.
There was therefore less infusion of fresh blood into the race than was formerly the case. The foreigners who did land on our shores tended to weaken the stock, for they were mostly town dwellers of poor phywith constitutions undermined

sique, with by disease. The frequent marriages of neurotics with those inheriting the taint of insanity was another cause, and the increased tendency to marry late ilife was anything but desirable. The abuse of alcohol was another great

abuse of alcohol was another great cause of lunacy. We were now a spirit drinking race, which we were not half a century back.

"There is no standard of purity for these spirits," said the speaker. "If the adulteration by noxious constituents be important factors in the causation of insanity should not the sation of insanity, should not the Legislature enforce both the maturity and the purity of all alcoholic drinks?"

The survival of the weaklings who would formerly have died in infancy the fact that we are rapidly becoming a nation of town dwellers, unatural excitement, over-education, late hours, badly selected and badly cooked food, and overcrowding were all responsible causes for the terrible increase in the lunacy returns.

Cannon Lamp Posts.

The earlier lamp-posts in London, ays The Magazine of Art, were evolved from the rannon discarded as obsolete or faulty after the Napol-eonic wars. These actual service cannon were freely used at Woolwich and probably other as street corner-posts, the bore be-ing plugged with oak to keep out the rain and refuse, the emerging end of the plug being shaped in hemispher ical form to represent the issue of a cannon-ball. Later on these real cannon were superseded by imitation iron castings, the half cannon-ball and all. This cannon pattern for corner-posts found its way to London, where it may still be seen in many of our older streets and squares. Frm the unenlarged cor-ner-post of the cannon pattern emerged the lamp-post of the period, which is familiar in London to this day.

A Gladstone Story. Just now, when gossip about the repeal of the corn laws is current, space may perhaps be found for a characteristic story of Mr. Gladstone. Early in 1892, when Mr. Gladstone was absorbed in home rule and obsessed by the delusion that his policy was popular, he roundly declared that the Irish question was the most important controversy in which he had ever been engaged. A listener ventured mildly to suggest that perhaps the struggle for the rethat perhaps the struggle for the re-peal of the corn laws was almost as important as home rule, but Mr. Gladstone would have none of it. "I do not deny," he thundered, "that if the repeal of the corn laws had been defeated there would have been a re-volution, but the Irish controversy is on a far higher plane." — Manchester (England) Guardian.

Christian Dewet Loses Mis Gun. A private letter from South Africa says: Christian Dewet, the renown-ed guerilla leader, failed to renew his gun license, and was summoned to the South African Constabulary to the South African Constabulary camp at Vredefort. He appeared, and on refusing to take out a new license, his fowling-piece and gun were taken from him by Captain Dalgleish, the officer commanding the S. A. C., at Vredefort, the district in which Dewet resides.

HOW FIRES MAY START. Several Things That Will Cause Spontaneous Com Sustion.

Damp lampblack will ignite from the sun's rays. The same can be said of cotton waste moist with lard or other animal oil. Lampblack and a little oil or water will under certain condition ignite spontaneously. Nitric acid and charcoal create spontaneous combus-tion. New printers' ink on paper when in contact with a steam pipe will ignite quickly. Boiled linseed oil and turpen tine in equal parts on cotton waste will ignite in a few hours under a mild heat and will in time create enough heat to ignite spontaneously, says Cassier's Magazine. Bituminous coal should not be stored where it will come in contact with wood partitions or columns or against warm boiler settings or steam pipes. This coal should not be very deep if it is to be kept on storage for a long period. If piled in the basemen: of a building it should be shallow and free from moisture and under good ventilation. That liable to absorb moisture should be burned first. If on fire a small quantity of water showered on this kind of coal cokes it and retards any great supply of water reaching the fire, thus necessitating the over-hauling of the pile. Iron chips, filings or turnings should not be stored in a shop in wooden boxes. The oily waste which is not infrequently thrown among them adds to the danger of fire from this source. The sweepings from the machine shop, if kept on hand, should never be placed over iron shavings. This mass of disintegrated iron is enough to incite heat and combus tion. Iron and steel filings and turn

There is no music for the old l'ke an old tune.

ings when mixed with oil will ignite spontaneously after becoming damp. A

steam pipe against wood will cause the

latter to ignite spontaneously after being carbonized, particularly if super-

heated steam enters the pipe, thus in-

creasing the temperature
