

DE LAVAL CREAM SEPARATORS

THE WORLD'S STANDARD

De Laval Cream Separators cost no more than other separators, considering actual capacity. They save an average \$50.—per year over other farm sizes of separators and an average \$100.—per year over other creaming systems, and they last twenty years as against two to five years for other machines. They are sold for cash or on terms that enable their paying for themselves, and there is no payment of any kind in advance that practically binds the buyer to his bargain.

De Laval Cream Separators are the highest type of farm implement made and invariably prove the most profitable of farm investments. They are guaranteed to be in every way as represented and to fulfil every claim made as a condition of their acceptance by the purchaser. They are sold on as sound a basis as a government bond and their prestige is as solid as the Rock of Gibraltar.

The buyer who puts his money into any other separator today and continually wastes some of his product through its use must surely do so without knowledge of the up-to-date De Laval machine, the opportunity for which knowledge is free to him for the asking.

After supper to-night,
take a brush and apply

Stephens

VARNISH STAIN

to your dining room table. In the morning you'll scarcely recognize the beautiful, smooth, glossy table as your former dingy, scratched one of the night before.

This requires very little work. It is much easier to do than you'd think, and the results are so pleasing and so surprising that you will never regret spending the little money it costs.

Write us for Booklet No. 20 and Color Cards for complete particulars about these superior and necessary Household Stains. Progressive hardware dealers will fill your orders.

THE MOST IMPORTANT FARM MACHINE

THE MANURE SPREADER

Are you Saving Money, or are you Losing it by being without One?

You believe that money spent for a mowing machine or a binder is well invested. Still you use these machines only a few days in the year.

You use the hay rake, because it saves you time and labor.

These are valuable machines. They are now counted indispensable by most farmers, even though they stand unused over eleven months in the year.

But a manure spreader is a still more valuable machine. Its purpose is to keep up the fertility of the soil. It is the machine you use *all seasons*, and the one on which the real usefulness of all your other farm machines depends.

If you have not already done so, you should consider now the advisability of having an I. H. C. manure spreader on your farm.

You will have choice of two different spreaders in the I. H. C. line—the Cloverleaf, endless apron spreader, and the Corn King, return apron spreader. Each of these spreaders handles the manure in all conditions perfectly and will give you long satisfactory service.

These spreaders are not ordinary. Their frames are made of air dried wood stock. They have serviceable, tractive power producing wheels, beaters that are unsurpassed for tearing the coarsest manure into the smallest pieces and applying it uniformly, aprons that deliver the manure to the beater with the least possible friction and

in a uniform manner. Any one of these machines will, if given proper care, last a lifetime.

The labor of spreading manure is greatly lessened by using one of these I. H. C. spreaders. Not only is the labor lessened, but it is changed into agreeable work.

But the strongest reason for using an I. H. C. spreader is the increased value you get out of the manure. The best authorities agree that manure spread by an I. H. C. spreader has at least double the value of manure spread by hand.

The I. H. C. spreaders pulverize and make the manure fine, and spread it evenly over the ground just as thick or as thin as may be required. The manure is placed upon the ground in a condition that is at once available for plant life. All is washed by the first shower into the soil—none is wasted.

The good effects upon the crop are immediate and the permanent benefit to the land is greater than when the manure is spread by hand. There is no question but that land manured by an I. H. C. manure spreader will give an increased yield of from two to ten bushels per acre over land where manure is spread by hand.

Consider the labor saved, the more agreeable work, the better crops, the more fertile condition of the land—is not an I. H. C. manure spreader the machine you should have?

Are you not losing money instead of saving money by being without one?

Call on the International local agent and investigate one of these machines. He will supply you with catalogs and particulars, or if you prefer write nearest branch house.

PLYMOUTH TWINE

What a Dealer Said:

"... But many years ago, from what our customers told us about twine, we settled down to handling PLYMOUTH TWINE only. Since that time we have never had a dissatisfied customer on twine, or a word of complaint about it; always warrant it, telling them to return if it does not work satisfactorily, but have never yet had a ball returned."

TRY PLYMOUTH TWINE this season, and you will always use it. Guaranteed full length and extra strength. No knots, no breaks, no delays, no loose sheaves or lost grain. Look for the wheat-sheaf tag on every ball. Get it at the local dealer's.
