

JEFFERSON.—A new variety raised by crossing the Concord and Iona. Thus far it has proved to be very healthy and vigorous, with large, thick downy leaves. It is a large, handsome and showy fruit, light red, covered with a thin lilac bloom, juicy, sweet and rich, with a sprightly aromatic flavor; much resembling the Iona, and the nearest approach to its delightful flavor of any yet introduced. It ripens with the Concord, and should be tried by every one who finds the Concord to ripen. It promises to be a most valuable market sort on account of its showy appearance, superb flavor, and maintaining its sprightliness for a long time after being gathered. (*See Cut.*)

LADY.—The earliest ripening white grape. The bunches are only of medium size, berries about as large as the Concord, of a light greenish-yellow when ripe, very sweet and pleasant. The vine is quite hardy, vigorous and healthy. It is well deserving of trial in our climate.

LADY WASHINGTON.—Certainly the most magnificent looking hardy grape I have yet seen, and as fine in flavor as it is beautiful in appearance. The vine appears to be perfectly healthy, the leaves are large, thick and downy, promising to endure well the extreme changes of our climate. The bunches are very large, berries medium, pale yellow, with a delicate pink tinge on the exposed side; juicy, sweet, slightly vinous, and fine quality. It ripens just after the Concord. If this grape on further trial should succeed well in our climate, it will be a most noble acquisition, and a most profitable market sort. I trust everybody will give it a trial who lives where the Concord will ripen. (*See Cut on Page 36.*)

LINDLEY. Rogers' Number 9.—A strong growing, healthy vine, and remarkably productive. Both bunch and

berry are of medium size; color red when ripe; sweet, juicy, and somewhat aromatic. An excellent variety, ripening just before the Concord.

MARTHA.—A very hardy, healthy and productive vine; the bunches and berries are about like those of the Concord; the color is a light greenish yellow; flavor sweet, with considerable of the muskiness of the Concord; but ripening a little earlier.

MASSASOIT.—The earliest ripening of all the Rogers Hybrids, and known as his Number 3. The bunches and berries are of medium size, red, good flavor, and ripe as early as the Hartford Prolific. The vine is hardy and vigorous.

MERRIMACK. Rogers' Number 19.—This also ripens earlier than the Concord, the fruit is black, large, rich and sweet, and the vine is productive and vigorous. Very like the Wilder in quality and flavor, and ripening about the same time.

MOORE'S EARLY.—A most valuable grape for our climate on account of the early ripening of both wood and fruit. It will grow as far north as any, and ripen its fruit perfectly. It is a black grape; in bunch and berry about the same size as the Concord, and fully equal, if not better, in flavor. It is ripe some time before the Hartford Prolific; and will doubtless prove to be a most profitable very early market grape. It should find a place in every garden. (*See Cut on Page 37.*)

POCKLINGTON.—A very large, showy, white grape; sweet, rich, with the musky flavor of the Labrusca family. The vine is healthy, vigorous, hardy and productive. It would seem to ripen fully just after the Concord. It will doubtless prove to be a profitable market grape on account of its large size of bunch and berry and showy appearance. (*See Cut on Page 38.*)
