## PANOPEPTON

In the many cases where treatment is directed toward the elimination of toxic material a most appropriate and successful resource for nourishment is found in Panopepton.

This food is absolutely sterile and cannot ferment; completely peptonised and cannot embarrass any function of the body; wholly assimilable and leaves no residue; agreeably stimulating and holds the patient subjectively to a hopeful outlook.

Panopepton contains fully 22% of soluble solids derived from prime lean beef and whole wheat through the action of the natural digestive principles of the gastric and pancreatic juices under conditions approximating as closely as possible to those of normal digestion, and represents the entire soluble substance of these two foods in a non-coagulable, highly diffusible and wholly absorbable form—preserved in fortified genuine Spanish Sherry Wine.

Panopepton is specifically a food for therapeutic use, adequate for nutrition and of peculiar excellence in respect to palatability, wholesomeness, reliability and uniformity.

The label gives complete analysis; literature and clinical reports in abundance are at the command of the physician.
