Export Contact: Mr. E.L. Bryenton, President

Established in 1982, E.L. Bryenton & Associates Incorporated (BRYTECH) is a privately owned Canadian company. It provides consulting engineering services, conducts research and development, and manufactures a number of electronic products. Areas of specialization include telecommunications, biotechnology and opto-electronics.

BRYTECH has worked with a number of international companies and governments on projects including feasibility studies, custom design and product development. Some of the products being produced include: ultrasonic mobility device for visually impaired; simulated speech generator; infrared heat detection device; infrared wireless communication system; optical bank note reader for blind persons; monitor for position and motion of human body; and a personal alarm monitor for vital health signs.

Brytech is currently identifying countries around the world that have bank notes of a standard size (or are planning to produce the like) and could utilize a reader for the blind. Primary markets have been Europe and Asia. With the expansion of its product lines around the world, Brytech is interested in joint ventures, manufacturing rights for electronic products as well as locating distributors to expand market potential.
