BUILDING HYGIENE.

The lighting and heating of modern office buildings, schools and halls are measured nowadays with mathematical accuracy. It is not sufficient that the light on one's desk appears to be normal. So important a matter cannot be left to chance. The exact amount of light which falls on your desk pad, for instance, is measured by means of an ingenious device known as a photometer, which gives the precise candle power of the illumination, whether it be from the sun or an electric bulb.

IN DEFENCE OF STEFANSSON

Meteorologist Denies Charges

Against Explorer in Connection With Arctic Expedition.

New York, Jan. 18.—Charges of Dr. R. M. Anderson of Ottawa and Prof. J. J. O'Neill, of McGill University that Vilhjalmur Stefansson has subordinated the interests of science to his own advantage in the official Canadian expedition to the Arctic in 1914-18 were denied yesterday by B. M. McConnell, meteorologist of the expedition.

"The charges," said Mr. McConnell, "lead the reader to believe that Stefansson was in charge of one expedition and Dr. Anderson of another. This is not the case. Dr. Anderson was in charge of the entire expedition, southern and northern parties, by the Canadian government."

Mr. McConnell said that after Stefansson's ship, the Karluk, which was to have carried the northern party, was crushed in the ice, the southern party refused to co-operate with the explorer.

The southern party contended that its chief, Dr. Anderson, had its own work to perform, he said. "I was sorry the Karluk had been lost but Stefansson could not expect it to sacrifice our plans for the coming year. Besides none of the men except Wilkins, who is now with Shackleton on his Arctic journey, were willing to accompany Stefansson to the moving ice of the Arctic ocean. It was here that Stefansson asserted his authority and incidentally incurred the enmity of Dr. Anderson, O'Neill and other members of Dr. Anderson's party."

There is the further charge by Dr. Anderson of extravagance and the request, familiar to all Americans, that the investigation be made by the Canadian government. The expedition, it must be admitted, like all expeditions and all projects, cost more than the government estimated it would cost. This is to be explained by the Canadian government's desire to have a complete scientific staff and to undertake work on a larger scale than Stefansson had planned.

"Had Stefansson followed his own inclination he would have had a small party and a small vessel. But here were men, most of whom had never been out of civilization before. Most of them declared the outfit that they were going to live on the simple fare that had sustained Stefansson and Dr. Anderson on their former expedition—seal meat and caribou. They wanted the ship stocked with canned goods and the food of civilization before. This was particularly true of Dr. Anderson's party, and it was this food and extra supplies necessary to charged with importing contraband alcohol and landing some of it at Plymouth."

Wm. Saunders, cook, who testified that he was engaged for the trip at Halifax by Bruno and Amaro, told part of the story being taken off in motor boats and in a two masted sailing vessel named The Star, off Plymouth. He said that the Golden West had been more than three miles from land at all times.

Charles Hewitt, another of the crew, said Captain Amaro had told him that one load of alcohol had been landed at Jeffries Point, Boston.

Another on a gasoline tank boat on South Boston fairs. He told of pumping alcohol from the drums in the schooner into cases taken away by the boats at Plymouth.

Testimony About Disposal of Part of the Cargo of the Golden West.

Boston, Jan. 18.—Testimony that part of the cargo of alcohol on the schooner Golden West, ostensibly bound for St. Pierre, Minn., to Nassau, B. W. I., was landed on the Massachusetts coast was given yesterday in the trial of five men charged with importing contraband alcohol and landing some of it at Plymouth.
