

Dysys presents the affordable personal computer.

Introducing the Chameleon by Seequa Special introductory price: only \$2,650.

The new Chameleon by Seequa is the personal computer that everyone is talking about. It does everything an IBM PC does for about \$2,000 less.

The new Chameleon runs all the popular IBM software like Lotus 1-2-3 and Wordstar. And the Chameleon has twin disk drives, a full 83 character keyboard and a bright 80 x 25 character screen. Just like an IBM.

The Chameleon has a lot of other features, unlike an IBM. It's 8-bit processor lets you run any of the thousands of CP/M 80 programs available. It's portable. You can plug it in and start computing the moment you unwrap it.

Our special introductory price includes two of the most popular programs around, Perfect Writer and Perfect Calc.

But perhaps the most important advantage to you, is us. Dysys Inc. not only helps you select the best hardware and software package for your specific requirements . . . we offer ongoing support capabilities that no other computer dealer in Atlantic Canada can promise.

At Dysys we believe in selling solutions. Our computer 'salesmen' are really trained engineers, systems analysts and software specialists. We can ease you

through training on your equipment and provide you with hardware maintenance, software support and custom programming. Now, what other computer retailer can promise you all these services?

See us at Computer Fair '84, Sunda March 4 in the McInnes Room for full information and a demonstration of the new Chameleon, and our other extraordinary computing equipment and supplies.
