

	PAGE
Penetration of the Skin—Hereditary Transmission—Multiplication of <i>Spirochaetae</i> —Diagnosis	290
Avian Spirochaetosis —Mode of Infection—Passage into Immature Ovary—The Infective Granule—Transmission by Ticks	298
Syphilis —Conveyance of <i>Spirochaeta pallida</i> —Contamination by Chancre—Contamination by Mucous Patch—Entrance of Specific Virus—The Initial Lesion—Excision of the Chancre—Infectivity of the Blood—Organisms in the Lesions—Transmission of the Disease—Syphilitic Heredity—Propagation	302
Malaria —Transmission—Mosquitoes—Culex—Anopheles—Habits—Malaria Problem— <i>Haemaphysa malariae</i> —Historical—Genus—Species— <i>Haemaphysa quartana</i> —Development—Single Quartan Infection	308
<i>Haemaphysa tertiana</i> —Development—Schüffner's Granules—Single Tertian Infection—Double Tertian Infection.....	316
<i>Haemaphysa subtertiana</i> —Irregularity of Fever—Type of Fever—Symptoms—Historical—Development of Parasite—Development of Crescent—Persistence of the Crescent—Formation of Flagellated Organisms—The Asexual Cycle—Sporulation—Pathogenesis—Anaemia—Cerebral Type—Intestinal Type—Pernicious Type—Factors Responsible for Pernicious Type—Severity of the Infection—Melanemia—Toxicity of the Parasite—Resistance to Medication—Quinine	320
<i>Halteridium</i> and <i>Proteosoma</i> —Development—Physical Characters— <i>Proteosoma</i> —Incidence—Experimental Mosquito Work—Process of Fertilization.....	340
<i>Piroplasma</i> —Different Species—Symptomatology—Transmission—Blood Lesions—Morphology—Bacillary Form—Spherical Form—Percentage of Infected Corpuscles—Immunity	348
<i>Anaplasma marginale</i> —Morphology—Transmission	354
<i>Haemogregarina</i> —Incidence—Development—Conjugation and Fertilization—Asexual Development—Effect on Host-cells—Transmission	354
<i>Leucocytozoon</i> —Development	362
<i>Leucocytozoon</i> —Sexual Forms—Effect on Host-cell	364
Kala-azar —Historical—Distribution—Transmitting Agents—Spread— <i>Leishmania donovani</i> —Morphology—Multiplication—Histological Lesions— <i>Leishmania infantum</i> —Duration—Progress— <i>Leishmania canis</i> —Blood in <i>Leishmania donovani</i> —Diagnosis—Culture Method—Spleen Puncture—Liver Puncture—Examination of Bone Marrow—Vesica-
