Bone dust is a lasting manure, and will continue to fertilize plants for years, when not ground too fine.

Manure may be spread in the orchard at any time. When the snow is on the ground a sled can be used with advantage, being lower than a wagon, and passing more easily under the trees.

Pile the manure in square and compact heaps; and if it is not frozen when thrown out, it will heat and ferment in the pile; but if once frozen it will be likely to remain so during all the cold weather.
