The Touch of Genius.

In Scotland there is told a story of one Sandy McIntosh, who started to build a small outhouse of brick. After the usual plan of bricklayers, he worked inside, and, as he had the material close beside him, the walls were rising fast when noon arrived, and with it his son, John, who brought his father's dinner.

With honest pride in his eye, Sandy looked at John over the wall on which he was engaged, and asked:

"How do ye think I am gettin' on?"

"Fine, father; but how dae ye get on?"

"Oh, but ye've got a grand bield on ye, John! Ye'll be an architect yet, as sure's yer feyther's a builder!"

### SOVIET CAMPAIGN AGAINST GROWTH OF LIBERAL IDEAS

Moscow, Sept. 3.—(Associated Press by Mail)—The Soviet regime is now waging a campaign to crush what it terms "bourgeois psychology" or the ideas of individual wealth and freedom from state interference. These have again sprung up in Russia as result of development of the new economic policy.

This psychology, speakers at the recent Communist party conference declared, is the most dangerous enemy of the ultimate success of Communism in Russia. It was pointed out that, since a measure of freedom of trade was restored, many Russians came to the conclusion that bourgeois and democratic ideas were again about to reign in Russia.

The Communists are determined that such ideas shall not be allowed to grow, and declare that the present way allowed to capitalism in Russia is merely a temporary step, opportunely utilized by the Bolshevik regime in the direction of the new communism to be reached in years to come.

This insistence on stamping out "bourgeois psychology" led recently to the exile of more than 150 Russian intellectuals who, while not actively opposing the Communist regime, nevertheless were unable to think along Communist lines.

One Moscow university professor, exiled abroad, declared the Communists now are endeavoring to force a monopoly upon Russia.

When a low grade of gasoline is used—one that is not volatile and pure—it does not respond to the spark quickly enough. The stroke of the piston is over before all ignites. This uncombusted gas line is then thrown off through the exhaust—and most of it often slips down past the piston
