

(*) (670) **Kirtland's Warbler.**
(*Dendroica kirtlandi.*)

On the 16th of May, 1900, Mr. J. H. Samuel took a bird of this species near Toronto, the only one I have heard of so far. It may yet be found breeding in the interior of the Province, as it does so regularly in Michigan. It is, however, a very rare species everywhere.

(671) **Pine Warbler.**
(*Dendroica vigorsii.*)

An irregular summer resident, sometimes common and in other seasons scarce.

Breeds throughout its range in the Province.

Arrives towards the end of April; departs in September.

(672) **Palm Warbler.**
(*Dendroica palmarum.*)

A tolerably common migrant in spring and autumn. Probably breeds in the northern part of the Province.

Arrives early in May; departs about the first of October.

Our form may be referable to *D. p. hypochrysea*. Specimens taken by me vary very much in the brilliancy of the yellow coloring.

(*) (673) **Prairie Warbler.**
(*Dendroica discolor.*)

A very rare visitor, two specimens of which were taken near Toronto in May, 1900, one each by Messrs. Samuel and Ames. Since then it has been found in south-western Ontario by Mr. Klugh.

GENUS SEIURUS.

(674) **Oven Bird.** (Golden-crowned Thrush.)
(*Seiurus aurocapillus.*)

An abundant summer resident in woods. Breeds throughout its range in the Province.

Arrives early in May; departs about the first of September.

(675) **Water Thrush.**
(*Seiurus noveboracensis.*)

A common summer resident. Breeds in the interior of the Province. Arrives early in May; departs early in September.

(676) **Louisiana Water Thrush.**
(*Seiurus motacilla.*)

A rare summer visitor along our southern border as far east as Toronto.
