

Memorandum March 29<sup>th</sup>

It is with great regret that many of the members of the Alumnae Society have heard of the proposal of the Principal and governors of the University to erect a gymnasium and dormitories on Sherbrooke St in the hollow in front of the Physics Building

The present arrangements of the buildings about the Campus with the open space stretching up from Sherbrooke St is very pleasing and it seems a pity with so much space available about the Stadium to spoil this effect with a five story building and to hide the picturesque front of the Physics Building

The latter building is already darkened on the north by the Chemistry and Mining Building and must inevitably have the lighting further affected by a five-story building south of it

With a long sighted view to the future developments of the University the area above Pine Ave seems the right and proper centre for the general life and physical activities of the students.

The chief opposition to the Gymnasium being on Pine Ave is the extra distance from the Arts & Science Buildings - This distance is at the most five minutes
