number of passengers was 9,861,024, and of freight 15,670,460 tons (15,921,187 tonnes met.) were carried.

There were 1,567 locomotives, 1,505 passenger and 25,645 box freight and entitle cars. The lines owned by Coal and Iron Mining Companies are not included in the above. Of these, there were in Nova Scotia 115 miles (182 kilometres) owned by 15 companies.

The Canadian Pacific Railway Company, in the year 1886, owned or controlled 4,555 miles (7,295 kilometres) of railway in Canada, of which there were in operation 5,769 miles (6,065 kilometres). The Grand Trunk Railway owned or controlled 2,598 miles (4,181 kilometres).

General position of railway progress from 1886, to date.

During the period between 1886, and the present date, railway construction, with all Its attendant developments, has actively proceeded year by year. By a tunnel under the River Saint-Clair, completed in 1891, the Grand Trunk Company obtained a new link of direct railway communication with the railway systems of Michigan, and by the close of 1890, the government had completed the extension of the Intercolonial to the Eastern harbour of Sydney Cape Breton, increasing to 1,142 miles (1,838 kilometres) the total mileage of that road. By the end of 1888, a direct line of railway had been constructed, giving a shorter route between Montreal and Saint-John, New Brunswick, crossing the State of Maine and communicating with Montreal by a new bridge over the Saint-Lawrence. This railway is part of the Canadian Pacific Railway system. North from Quebec 242 miles (389 kilometres) of railway have been built, giving access to the fine agricultural district of the Lake Saint-John. Northward from Ottawa, another agricultural district of promise is about to be opened up, 56 miles (90 kilometres) of railway having been constructed: further West, a line, of which 25 miles (40.2 kilometres) are built, is about to pierce the district at the head of the River Ottawa: west of Winnipeg, the country to the northward is being opened up by railways touching the main line of the Canadian Pacific. Already one line extends 250 miles (402 kilometres), another 254 miles (409 kilometres), and a third near the eastern slope of the Rocky Mountains, 191 miles (707 kilometres) long, give access to sections of valuable country, while to the south extensive coal districts are being served by more than one road, and connection is made with American railway systems.

In the older Provinces of Ontario and Quebec, the southern portions are covered with a net work of lines. At the present date six lines of railway centre at Quebec, seven lines at Montreal, seven at Toronto, six at Ottawa, and nine at Winnipeg.

Railway Statistics 1893-94.

As before observed, the Dominion and Provincial governments and municipalities have largely assisted railway enterprise by grants of money and lands. Up to the end of June 1894, the Dominion government, apart from the construction of its own roads and aid to the Canadian Pacific, had assisted in the construction of 71 railways to the extent of over 11 1/4 million dollars (56,250,000 franes) in eash. The various Provincial governments had assisted railway enterprise to the extent of nearly 50 million dollars (150 million franes) and municipalities nearly 16 million dollars (80 million franes).
