satisfied us that the enormous resources station can be tunnelled under, to give fence. Thirty years continuous - study has of the Mackenzie valley and what we a track to the river between the saw call the great Gulf region of the do- and pulp mills, and a swinging bridge which lay side by side, and possibly can be devised to answer all must average more than 2,000 miles square, and are packed with mineral and material resources of known great value, must be brought to the winter ports of the dominion via the proposed | the highway bridge. Baie Verte canal here to be put into the best shape for and then reshippe mainly to British ports;

We propose the construction of massive granite wall to start from the southwesterly angle of the I. C. R. wharf and run to a point a little east of the island, then to turn easterly and run east to the lower side of Red Head. This wall to be of the height of our highest tides, and always to maintain the water within them at that point. 'The litt'e ice that will make inside of this wall can be broken up by a small tug, as in the case of Philadelphia and other ports of that vicinity. In our case the broken ice can be crowded out of a top gate in the wall.

At the bend of the wall a double fron gateway is to be provided to admit and let vessels out of the proposed wet basin.

We propose to utilize the foothill of Red Head by raising it say three feet
