run at the cattle market today, with a fair demand for all kinds of butchers' cattle, a few inquiries for export, but very few offering, and inquiry for stockers and feeders of good quality. It is said the reason for the light supply of exporters is that farmers have made up their minds to hold on to their stock for awhile yet, rather than let them go at lower prices than they have been get-They are inclined to believe, fact, that good prices will yet be realized, in spite of the fact that a few of the dealers have been able to buy just recently a few loads of export cattle in the United States at comparatively low prices. This is a condition they think is not likely to last long. At all events, the drovers are apparently not succeeding very well in inducing the farmers to part with their best cattle at reduced prices. Some good exporters were looked for in the market this morning, but were not to be found. A few lots were bought, but they were not first-class quality, and the prices were not high. There was a fairly good butcher trade at steady prices, loads selling at \$4 to \$425, picked

It stands to reason that when labor is so scarce and high-priced as today it is in Ontario, and when labor is so cheap in Europe—agricultural labor being in Europe today, where beet is grown, 30 cents per day for a man, 15 cents per day for a woman, and child labor 10 cents per day-we are working under a disadvantage. The business is not yet tested and has to be tested. One other thing let us recall, the businesses and factories which have been started were started by pro-

moters, and the new ones which are being advocated are also being started by promoters. Their business is naturally to obtain their commission, which amounts to a considerable sum, and to sell the machinery at on extremely high price, 25 per cent above its worth, to the stockholders.
