A new invention that is capable of converting ordinary German felt into a very tough material that is almost indestructible is likely to revolutionize the boat-building industry. The new material will take the place of cedar for canoes; and rowboats and launches covered with it are greatly enhanced in floatability and non-leakableness. It is absolutely impervious to water and consequently will not swell or shrink, and, therefore, will not part at the seams, of which there will be fewer in number.
