

Defining Notebooks

A *notebook* is a collection of spreadsheet sheets stored in the same *file*. In Quattro Pro, a file is the same as a notebook. These sheets can contain different types of information that are usually related in some fashion. For example, each sheet of a sales notebook might contain sales data for a specific division.

Notebooks can contain up to 256 sheets and an *Objects sheet*, which is the last sheet in the notebook. The sheets consist of the usual column and row grid. The Objects sheet contains an icon for each graph and slide you create, as well as icons for any custom dialog boxes you might create.
