

Solar photography.—A photoheliograph has recently been purchased. It is equatorially mounted, has a good driving clock and is arranged so that photographs may be taken either in the primary focus or by enlarging lenses which give images of 2 in., 4 in. and 8 in. diameter. A house has been built for its reception and the permanent adjustments have been made. Arrangements for beginning work are not expected to be complete before the early spring, when, it is hoped, we shall be able to undertake the regular work of photographing the sun once on each clear day.

EDUCATIONAL WORK.

Instruction in meteorological observations was given to a class of six undergraduates in Arts, and in Applied Science. Six students in the Civil Engineering department have attended the course in transit observations. The Blackman telescope has been employed in connection with the astronomical classes in the Faculty of Arts.

Respectfully submitted,

C. H. McLEOD,
Superintendent of the Observatory.

MCGILL COLLEGE,
Montreal, Jan. 12th, 1887.
