

CHAPTER IV.

	PAGE
The strata of the Purcell and higher Selkirk mountains.....	58
Beltian system.....	58
Definition.....	58
General stratigraphy.....	60
Basal quartzite.....	62
Lowest limestone.....	65
Moose metargillite.....	66
Illecillewaet quartzite.....	66
Laurie formation.....	67
Cougar formation.....	70
Nakimu formation.....	76
Ross formation.....	78
Cambrian system.....	81
Sir Donald formation.....	81
Upper Cambrian beds in the Columbia valley.....	83
Correlation with the Rocky Mountain Cambrian.....	84
Relation of Cambrian and Beltian in the Canadian Cordillera.....	87
Correlation with the Cambrian-Beltian rocks at the 49th parallel..	94
Conditions of sedimentation in the Rocky Mountain geosynclinal.	97
Sources of the clastic material.....	97
Dune-sand quartzites.....	100
Loessic quartzites.....	102
Flood-plain and playa deposits.....	106
Origin of the pre-Ordovician limestones.....	107
Metamorphism of the Selkirk series.....	110
Structure of the Beltian-Cambrian terrane (Selkirk and Purcell mountains) in the railway belt.....	112

CHAPTER V.

Interior plateaus west of the Shuswap terrane.....	116
General stratigraphy.....	116
Absence of Beltian and lower Palaeozoic rocks.....	117
Carboniferous system.....	119
Nicola series (Triassic-Jurassic).....	122
Kamloops Volcanic group (Oligocene).....	126
Correlations within the western geosynclinal belt.....	131

CHAPTER VI.

Intrusive rocks younger than the Shuswap terrane.....	133
Trap dykes cutting the Shuswap terrane.....	133
Basic injections cutting the Selkirk series.....	134
Granitic bodies of Jurassic (?) age.....	136
Summary of the igneous rocks.....	141
