#### PROSPECTUS

This company has acquired the Leo group of seven claims, viz: The Leo, Keno, Evelyn, Edna, Latah, Royal Anne, and Rising Sun, situated within 3 1-2 miles of Hall's Siding on the Nelson & Fort Shep pard railway, within a few hundred yards of the well known Fern mine on the north, and adjoins the Monarch group to the southwest; the Silver King mine being about four miles to the north and the Porto Rico some three miles to the south, whilst the Flying Dutchman and Venus group, recently bonded to the Silver King. Mining company for \$90,000, are in the near locality.

The main ledge on the property, running in a northwesterly and southeasterly direction, is composed of perphyritic quartz cutting through the granite forma-tion. This ledge, which varies from 50 to 60 feet in width, can be traced from the Latah across Keno creek, through the Leo and into the Rising Sun claim, where it is lost sight of under a covering of soil

The ledge is well mineralized, and contains several parallel high grade pay streaks, running in the same direction and varying from a few inches to two feet in width. The hanging wall is of decom-posed granite, and the foot wall is com-

posed of soft micaceous schist.

The whole of the development work, so far, has been done on the Leo mineral

claim, and consists of a shaft 20 feet deep, 4 by 6 feet inside the timbers. There are also three open crosscuts, No. 1 being about 40 feet long, 3 to 5 feet deep and 4 feet wide; No. 2 being about 70 feet long, 3 to 12 feet deep and 4 feet wide, and exposing the ledge for a width of 55 feet, and No. 3 about 45 feet long, 3 feet deep

and 3 feet wide. Another shaft has since been sunk 35 feet and a contract has just been let to sink it to a depth of 85 feet, when the vein will be crosscut. Work is being systematically pushed in the shaft. There are ample funds in the treasury to pay f. r.

It is proposed, in doing further development work, to sink some distance upon the ore in the main ledge at present ex-posed, and then crosscut below, with a view of cutting the numerous pay streaks which outcrop near the surface, and which in all probability unite with depth, and if site available lower down the hill.

#### WATER AND TIMBER

There is ample supply of excellent timber, suitable for building or mining requirements, and an abundant supply of water in the creek for all domes milling purposes. Keno creek runs through several of the claims comprised within this group, and there is a good site available for the erection of a mill when neces-

In addition to the above the following assays were obtained by Mr. Plewman of Rossland, the official broker of the company, whose representative recently visited the property, and took samples of the

# 7.47 24.10

Whilst the high grade ore would naturally be sent direct to the smelter, that of a lower grade could be concentrated on the spot, and in this connection it may be the spot, and in this connection it may be noted that the group is admirably situated on a mountain side at an elevation of about 6,000 feet above sea level, from which there is an excellent route for a gravity tramway to a point lower down on Keno creek.

#### SALE OF SHARES

The first issue of 75,000 shares of treasury stock is now exhausted. The price from now on is 10 cents per share.

The who's

of the Vendors' shares have been absolutely pooled, and under no circumstances will be placed on the market until Feb-ruary 1st, 1901, or until payment of the
