

Sprains and Bruises

A sprain or strain is the stretching or tearing of the ligament about a joint or the fibres of a muscle. Besides the soreness there is inflammation shown in redness and swelling. Prompt rubbing with Dr. Chase's Liniment brings the blood to the surface of the skin, reduces the inflammation and congestion and takes out the soreness. After applying the liniment for Sprains or Bruises the sore parts should be bandaged or wrapped with cloth. Relief comes almost like magic when Dr. Chase's Liniment is promptly used for Sprains and Bruises and it is equally effective in the relief of other forms of pain such as rheumatism, lumbago, backache, etc.

Gold Prospects in Labrador.

By VICTOR GORDON.
"Is there gold in Labrador? Undoubtedly there is, for traces of the precious metal have been found there, as they have been found in many lands. There is gold in Newfoundland. That has been proved beyond question. The Till Cove Mines made an appreciable increase in the world's wealth from the gold extracted. The question to be decided is not so much whether there is gold, but whether it is in sufficient quantity to make its search and development a paying proposition."
The above is from the Daily News of St. John's, Newfoundland, and the answer to the question will be awaited with interest when the result of the forthcoming expeditions are made known.
The best one can do in forming a judgment as to whether gold does exist in commercial quantities in Labrador, is to weigh the evidence of people who have lived in that country, and whose knowledge of the conditions entitles them to speak. But this is not so easy as it might seem, for the Labrador peninsula is a sparsely populated place at best, and there are very few people who can speak with authority about its geological characteristics. Mr. A. P. Low, formerly Deputy Minister of Mines in Canada, who conducted a survey of Labrador in 1892-95, reported that no free gold was actually found by his party, but that the gravels of the river beds should be examined, and they might easily contain the greatly-prized metal.

WHITE MUSLIN WAISTS
Dainty embroidered collars
SALE PRICE 93c.

There's a very pleasing assortment comprising serviceable Colored Poplin, Fancy Guimpe Blouses and Dainty White Voile. All greatly underpriced.

Sale Price 1.75

Striped Voile Over Blouses . . .1.25
Fancy Tricotee Over Blouses . . .1.95
Black Tafeta Blouses . . .2.75

BLACK LUSTRE BLOUSES
Regular 3.30
SALE PRICE 2.10

A Timely Sale of Blouses

Fortunate Purchases are responsible for these Remarkable Values in Fashionable Blouses. We list a few prices here. There is also a big assortment of the better qualities on sale. Come and make your selection while these prices are in force.

WHITE VOILE WAISTS
Pretty designs, Organdie collars
SALE PRICE 1.25

Then there are White Silk Jumpers, Popular Shantung and Silk Poplin Blouses, and exquisite Georgette Over Blouses. Some of these were selling as high as 10.00 each.

Sale Price 3.75

Smart Tricotee Over Blouses. Navy, Merve, Silk Over Blouses with Cream Lace Collars, and pretty Georgettes in many beautiful shades. You will quickly realize the exceptional reductions in this selection.

SALE PRICE 4.75

Colored Crepe de Chene Blouses 3.95
White Jean Middies . . .1.25 up
Flannel Sports' Middies . . .3.75 up.

WHITE VOILE BLOUSES
Regular 2.00
SALE PRICE 1.39

New Currants

Direct from Greece :

56 lb. boxes Loose, 50 lb. cases Cleaned.

HARVEY & CO., Limited

meet with the warmest approval of every experienced geologist and mining man, are, unfortunately, still too frequently ignored by those who embark on mining ventures with insufficient technical qualifications.
"The trained observer would be able to begin his work before reaching the country. From previous researches he would find that the coast of Labrador has affinities with the Newfoundland and St. Lawrence regions, so that there is at least a probability that the same conditions will be favorable in both places. Investigation of the records of known occurrences of gold in Newfoundland shows that they belong to the well-known type, Archæan rocks intruded and interbedded with their offshoots. Extant reports upon Labrador indicate that similar formations are well developed there; so that already the method of occurrence is fairly certain. The subsequent examination on the field would rapidly settle this question, and the range of enquiry would be further narrowed by the precise determination of the particular types of intrusives and country which seem locally most favorable.
"Acquaintance with the general

theory of gold deposition would here enable essential to be distinguished from chance features. Armed with this knowledge, the geologist would be able to select sites with discretion and describe them with accuracy, or should the conditions at a particular place seem insufficiently promising, he would have a valuable weapon with which to attack the problem elsewhere.
Whatever the result of the various

expeditions to Labrador in the coming summer, one feels confident that so vast a country cannot but contain some meritorious substances utilisable for mankind's industrial needs.
So much then for the "gold rush." The casual prospector with modest capital should be cautious, but there is no harm in hoping that the "Bonanza" days of the Klondyke and Australia will be seen again this year in Labrador.—Canada, April 28.
*Mr. E. H. Cunningham Craig, B. A., F.R.S.E., F.G.S., is a very well-known consulting geologist, and is closely associated with the Anglo-Frusian Oil Company and the Burmah Oil Company, to which he acts as consulting adviser. Mr. Craig was at one time on the staff of H.M. Geological Survey, and has conducted investigations into the mineral resources of the Barbadoes, South Africa, India, Persia, Venezuela, Canada, and Egypt.
For negligence, a brooded eskin with small all-over pattern is important. Planted lace has gained recognition.
MINARD'S LINIMENT FOR RHEUMATISM.

1923 Columbus Ladies Association ELECTION SWEEPSTAKE

PERMISSION GRANTED.

PRIZE LIST:

1 Total Votes received by all Candidates . . . \$1000.00	Unclaimed	
2 Total Vote received by lowest Candidate . . . 200.00	"	
3 Total Vote of the elected Candidates . . . 100.00	"	
4 Total Vote of the defeated (not elected) Candidates . . . 100.00	"	
5 Total Vote received by Winning Party (elected Candidates) . . . 50.00	"	
6 Total Vote received by Defeated Party (elected Candidates) . . . 50.00	"	
7 Difference between the Votes received by the Winning Party and the Defeated Party (elected Candidates) . . . 50.00	"	
8 One Half (1/2) of the Total Vote received by all Candidates . . . 50.00	"	
9 One-Fourth (1/4) of the Total Vote received by all Candidates . . . 50.00	"	
10 Three-Fourths (3/4) of the Total Vote received by all Candidates . . . 50.00	"	
Total Votes received by the Elected Candidates for . . .	Winning No.

BOWRING BROTHERS, Ltd.

Forty-Four Years in the Service of the Public—The Evening Telegram.

Appreciation of Firemen's Services.

Chas. H. Hutchings, Esq., K.C., J.P., O.B.E., Inspector General, City.
Dear Sirs—We enclose herewith our cheque for \$100.00 (one hundred dollars) as a slight token of appreciation of the valuable services rendered by the Firemen, in connection with the fire in our plant on Duckworth Street on Sunday last.

By the heroic work of the members of the Fire Brigade, the fire, which for a time threatened to assume alarming proportions, was confined to our plant, and the adjoining one of Dicks & Co.
We would also like to congratulate you on the addition of the pump to your fire equipment, without the aid of which it is doubtful if the fire could have been got under control without considerably more damage.
Yours sincerely,

THE TRADE PRINTERS & PUBLISHERS LTD., (Sgd.) D. R. Thistle, Secy-Trea.

INSPECTOR GENERAL'S REPLY.

Dear Sirs—I beg to acknowledge receipt of yours of to-day's date, enclosing cheque for \$100.00, in appreciation of the services rendered by the firemen, in connection with the fire at your plant, on Sunday last. I assure you that the members of the Department feel very grateful for this recognition, and for your kind words of praise.
Personally I thank you for your congratulatory references to the new Pumper. Only since its introduction have I felt that the city has anything near adequate protection, and I feel that my agitation for its introduction, if it has not already done so, will, before long, receive public appreciation.
Yours sincerely,
(Sgd.) CHAS. H. HUTCHINGS, Inspector General of Consty. The Trade Printers & Publishers, Ltd., City.

Extraordinary Attraction at the Nickel Monday.

NORMA TALMADGE HAS FINE CAST IN "SMILIN' THROUGH."

Norma Talmadge has a splendid supporting cast appearing with her in her latest starring vehicle, "Smilin' Through," which will be the first National attraction at the Nickel Theatre next week.

The two principal male roles are portrayed by William Standing and Harrison Ford and other well-known screen artists in the cast are Alec B. Francis, Glenn Hunter, Grace Griswold, Miriam Battista and Eugene Lockhart.

The production is an adaptation of Allen Langdon Martin's highly successful stage play and has an unusually dramatic plot, in which the romance of a young couple is upset because of the tragic act years before of one of the parents.
Made under the direction of Sidney Franklin, it is said to lead all Miss Talmadge's previous productions in artistic and dramatic achievement.

According to all accounts, there will be upwards of 20,000 people making tracks for this remote territory when navigation opens in a few weeks' time. Whether they are wise in going there or not, is debatable, for there is very little information in existence that would justify the extravagant reports that have been circulated by the promoters of various expeditions. On the other hand, unless the waste lands of our Empire are examined and explored, how can we ever know the real value of our inherent resources?
It may be of interest briefly to describe the conditions that exist in Labrador. Whatever knowledge we have is mostly gained from a few noble exemplars of our pioneer race who have spent their lives in the country, such as Dr. Wilfred Grenfell, C.M.G., the well-known medical missionary; the Rev. Henry Gordon; E. C. Robinson, F.R.G.S.; the Hudson's Bay Company's agents at various posts along the coast, of whom the late Lord Strathcona was one; and last, but by no means least, from the Moravian Fathers, who, for long years, have ministered in lonely self-sacrificing charity to the Eskimos and the Indians who dwell behind the shores of this limit and cheerless land.
The name of Labrador is said to be derived from the French Le Bras d'Or ("The Arm of Gold"), and this may give fresh heart to prospectors.
A large portion of the peninsula, amounting to about 120,000 square miles or more, is under the jurisdiction of the Government of Newfoundland, and has been so, with only one interruption, since the Treaty of Paris in 1763, when the rule of the Government of France in North America came to an end.
Like the island of Newfoundland, Labrador is a country having great waterways, and rich areas generously forested with timber suitable for the manufacture of pulp and paper. It is, however, a highly mineralized country, belonging to the geologists to a formation, or series of formations, older than any other on the world's surface. The people who inhabit the country are of three kinds—the Eskimos, the Indians, and local white residents called "hiviers," and, in addition, there is each summer an influx of Newfoundlanders who catch and cure codfish, and who return to the island at the end of the fishing season.
The scenery of Labrador is very much like that of Norway, and consists of a rugged and forbidding coastline, dotted here and there with innumerable islands. It is interrupted at intervals by great openings in the land in the shape of bays and fjords, which extend, in many cases, far back into the country. The great Hamilton Inlet, just north of which is Stag Bay, where gold is said to have been discovered, is probably one of the greatest watercourses in the world. Near the source of the Hamilton River are the Grand Falls, which, according to the reports of travellers, have no equal for picturesque quality, and for volume of power.
One of the great disadvantages of Labrador is that for about six or seven months of the year it is closed to navigation. Ice coming down through the Straits of Belle Isle in winter, and in the spring, renders navigation difficult and dangerous.
Put very briefly, these are some of the facts about Labrador. As to its gold-containing possibilities, who can say? The geologists are agreed that the rivers in this rugged land may easily contain gold, and as to this it is interesting to quote Mr. E. H. Cunningham Craig, who says as follows:—

"Both Newfoundland and Labrador are known to contain minerals, and especially metals, of value, but owing to scantiness of population, prevalence of forests and muskegs, and occasional thick superficial deposits, there is considerable difficulty in obtaining surface evidence, and most of the promising mineral prospects must be hidden till laid bare by chance or accident.
"The gold specimens and reports that have come lately from Labrador have caused not a little excitement, and it is predicted that there will be a rush of prospectors to that region as soon as navigation opens. Such rushes are always to be deprecated, but there is no doubt that they are often instrumental in discovering mineral fields of very great value.
"In this case there is a good prima facie case for the probability of great finds being achieved. The rocks exposed are amongst the oldest in the world, and are pierced by igneous intrusions of various natures. It is precisely under such conditions that metalliferous veins are most likely to occur, and to be most richly endowed with pay ore.
"More than half a century ago, Mr. Alexander Murray, then Director of the Geological Survey of Newfoundland, ascribed the failure of various attempts to open up mines in the island not so much to the absence of mineral as to the indiscriminate and unsystematic manner in which the experiments were directed, and he proceeded to lay down a few simple maxims on the way in which preliminary investigations should be carried out, which, although they will
