

No department of science has advanced more rapidly than that which pertains to the correction of the vision. To give the public some idea of the ordinary defects which exist in the vision of a great majority of people we will summarize a few of the more common refractive errors as presbyopia, myopia, hyperopia, and astigmatism. All of the above defects, not properly corrected with special made constant eyeglasses, causing often acute neuralgia, headaches and all other facial troubles to which we are often, through our ignorance of a remedy, subjected. I have obtained the services of a well-known optician, Prof. C. H. Bates, who has traveled throughout the United States and Canada, meeting with success in his profession wherever he has gone. I charge to examine the eyes. JOHN BRODIE, 360 Dundas Street, London, Ont.
