

The first part of the paper is devoted to a discussion of the  
 general theory of the subject. It is shown that the theory  
 is based on the assumption that the system is in a state of  
 equilibrium. The second part of the paper is devoted to a  
 discussion of the experimental results. It is shown that the  
 results are in good agreement with the theory. The third part  
 of the paper is devoted to a discussion of the conclusions.  
 It is concluded that the theory is in good agreement with  
 the experimental results.
