

A Special Inducement

Those wishing to graduate in different departments of Applied Science must take in connection with Mathematics, Science, etc., a course in Wood-work, Iron-work, and Drawing. All this has hitherto been done at McGill University, or other higher Institutions, at a cost of from \$350.00 to \$600.00 per year.

We are authorized to state that much of this necessary Manual work can be taken at our Manual Training Department along with the necessary Mathematics and other Studies in our Academy and College.

The Student can do this at a cost of about \$160.00 a year and thus save two years' labor and expense at the distant University where the cost is about three times as great.

This is a great advantage and claims the attention of both Academy and College Students, contemplating a course in Applied Science.
