NOTE.—We can say nothing reliable of the "cause of Insanity" in the individual cases. Instead of a History or Record of each case, there was sometimes no clue even to the name or religion of the patient. Where there exists a tendency, hereditary or otherwise, to disease or disturbance of the functions of the brain, the first exciting cause, whether love, grief, loss or gain of property, religion, intemperance, &c., merely gives a direction or complexion to the form of Insanity.

The "Nature of Malady" is extremely various even in the same individual at different times. Of the 153 now under care, 12 are epileptic and dangerous only after an attack, 17 are simply epileptic, and unable to take care of themselves; 22 are unsafe, dangerous, and require constant watching; 47 are depraved and filthy in their habits; 15 are idiotic from birth, or have become so from long continued confinement or disease of the brain. The remainder, 30, labour under many different forms of Insanity.

Most patients with disturbance of the brain are liable to attacks of "Mania," strictly so called; the attack however seldom lasts long.

This Note is signed by Drs. Douglas, Morrin and Frémont.
