old a horse.

Scientific. Practical chemistry is wisely directing its attention to certain fertile causes of discuses, with a view to their ultimate removal. It has already determined that a great many mysterious cases of illness, among physically weak persons especially, are due to the diffusion of carbonate of lead, common white paint, and of will be ten years. In the militin the term will be ten years. the arsenical or antimonial coloring matter of paint and wall paper in the atmosphere. Dress stuffs are often charged with poison. Even green Venetian blinds have been found to send clouds of arsenical dust into a house when the paint on them is dry and when they are thrown up violently.

The electric light is at present produced by two different methods. The first, which is the most generally known, consists in employing two carbon electrodes, between the extremities of which is formed a luminous ray, known as the voltaic arc. The second and less known method consists in the interposition between two carbon conductors of a carbon between two carbon conductors of a carbon under orders to embark on Monday next for tremities of which is formed a luminous ray, between two carbon conductors of a carbon rod of much smaller section. In this case, instead of a vapor-like are or ray of flame, the rod itself becomes incandescent. A third mode of illumination by electricity is by mode of illumination by electricity is by means of what are known as Geissler tubes.

The Act of Parliament for the abolition of but the light thus obtained is so feeble as to be unsuitable for practical use.

The Telephone.—A satisfactory trial of Mr. Edison's carbon telephone has been made be-115 miles, the wire used running alongside gradually being absorbed, many others. Notwithstanding this, and the fact that the weather are that the weather are that the weather are that the weather are that the second of the se could exchange business telephonically upon a circuit that was being worked 'quadruplex' without disturbing the latter.' The same authority states that the carbon telephone has been tried with success over a wire 720 miles in length. Mr. Edison, not content with the achievements just indicated has lately made a new and improved receiver to his instrument, of which, he says, in a recent letter to Colonel Gourond, that by its means " Batchalor" (one of Mr. Edison's assistants) "heard a whisper last night lifteen feet away from the receiver, and ordinary conversation comes out almost as loud as originally spoken."

Mr. Edison's "Spanetrophone."

We remember meeting Mr. Edison, some years ago, when he was most deeply absorbed in his experiments relating to the conductibility of sound through various mediums, and had a long and interesting conversation with him on that subject. We conversed upon the well-known fact that the same medium of transmission has different properties at different times. We both cited instances in which a man, forty-three years old, though using his utmost strength of lungs and voice could not shout lond enough at half-past six in the morning to awaken a boy nine years old, fast on the other side of a tath and plaster partition, while at eleven o'clock that night the same boy would hear a low whistle in the street, through three doors and two flights of stairs, and would spring instantly out of a sound sleep in response to it. It was a belief of Mr. Edison's at that time that sound could be made to travel as rapidly as feeling, and, to test the matter, he had invented a delicate machine called the spanctrophone, which he was just about trying when we met him. We were greatly interested in the nachine, and readily agreed to assist in the experiment. By the aid o'f Mr. Edison and a small coin we enticed into the laboratory a boy about seven years old. After many times reassuring him, and promising him solemnly that he would not be hurt, we got the machine attached to him, and promising him solemnly that he would not be hurt, we got the machine attached to him, and promising him solemnly that he would not be hurt, we got the machine attached to him, and promising him solemnly that he would not be hurt, we got the machine attached to him, and promising him solemnly that he would not be hurt, we got the machine attached to him, and promising him solemnly that he would not be hurt, and the great inventor. Mr. Edison raised his hand. A biercing how! rent the air, followed by a sharp concussion like the snapping of a musket cap. And, when we examined the dal plate of the machine, infallible science proudly demonstrated that the boy howle ed that the boy howled sixty-eight seconds before he was slapped. The boy went down stairs in three strides, with an injured look upon his fearful face. Mr. Edison threw the machine out of the window after the urchin, and we felt that it was no time to intrude upon the sorrows of a great soul writhing under a humiliating sense of failure. We have never met Mr. Edison since, but we have always thought he didn't know much about boys, or he would know how utterly unreliable the best of them would be scientific for an experiment.

Military News.

MILITARY SERVICE IN GREECE.-The Prussian military system will be introduced in the army of Greece on the 1st of January, 1880.

The Duke of Connaught, commanding the First Battalion of the Rifle Brigade at Woolwich, handed over his charge on Monday to Lord Clinton, having been granted leave until the middle of December. His Royal Highness has proceeded to Berlin, and will remain there about three weeks.

Officers at the Chatham garrison are invited to volunteer to proceed to the Cape of Good Hope in charge of reinforcements. Some few officers of the Royal Artillery have already the Cape.

GENTLEMEN AT ARMS.—Her Majesty's Body Guard of the Honorable Corps of Gentlemen army purchase has enabled Lieutenant Sir William Topham, Knight, to retire, receiving the amount he gave for the appointment, some £9,000. The minor appointments in tween London and Norwich, a distance of over the corps are worth some £1,200, and are

It is believed that unless the Eastern fact that the weather was bad, and the induc- horizon brightens up considerably the Governtion was easily carried on According to a frecent work by Mr. Prescott, the chief electrication was the control of the control cian of the Western Union Telegraph Company | the strength of the army at home, and unless of America, the carbon telephone has been the First Reserve is called out it will be insuccessfully used when included in a Morse possible to maintain the First Army Corps at possible to maintain the First Army Corps at circuit:" and further. "that several stations its full strength, ready in case of need for immediate embarkation for foreign service.

A New Projection.-A simple contrivance for converting common shells into incendiary projectiles has been successfully tried at the Woolwich proof butts. The shell is charged with pieces of port-fire or star-composition rod, each piece about three inches in length, and gunpowder is then poured in to fill up the interstices and form the bursting charge. On being fired into a building or into the midst of an ammunition train, the charge is ignited by a time fuse or percussion fuse, and the shell not only bursts into a hundred fragments, scattered in all directions, but distributes more than a hundred flaming port-fires, each burning fiercely for sufficient time to ignite any inflammable object with which it may come into contact. The ordinary fieldgun projectiles have been used in this way as well as the high-flying shells of the 6-3-inch howitzer, and both have answered well.

The two officers who have fallen in the attack upon Ali Musjid belonged to the 27th Bengal Native Infantry, a Punjaub regiment stationed at Nowshera before the commencement of the present war. Major Henry Holwell Birch had only recently obtained command of the 27th in succession to Brigadier-General Doran, C.B. He had over twenty years' service, and had served as a volunteer throughout the memorable defence of the Lucknow residency in 1857, subsequently taking part in the occupation of the Alumbagh, and in the siege and capture of Lucknow, when he was employed as an assistant field engineer. Major Birch has, we regret to state, left a wife and several children. Lieutenant Thomas Otho Fitzgerald who fell at the same time as his commanding officer, had been in the service since November, 1869, and was for several years a subaltern in the 2nd battalion 19th foot. He afterwards qualified for the Bengal Staff Corps, and had been attached to the 27th Native Infantry as wing officer and quartermaster since June, 1875.

AN INCHEST IN THE AFGHAN WAR,-A picturesque touch is given to the capture of Alimusjid by an incident narrated in one of the special telegrams. As it grew dark on Thursday afternoon the result on the fort was postponed. While the staff were next morning peering through the early mist preparatory to a renewal of the attack, they saw a solitary horseman advancing towards them. "It was young Chisholm of the Lancers," who had gone on a reconnaissance by himself, and found the fort abandoned! Full of the impetuosity of the English youth, he could not wait for orders. Carrying his life in his hand, he had gone to have a look at the fort and the enemy. The story recalls some of the incidents of the Peninsular war. It is

to suppose that the notice was an attempt to introduce the fashion of wearing low-necked dresses in the Dominion, as that fashion has long prevailed in fashionable circles in this country. We quite concur in all that has been said in condemnation of the fashion itmeiancholy, from having sacrificed Essex to self. Nothing can be said in favor of it which would commend itself to the plain, practical common sense of our own people.

Milk in sealed glass jars, after the "Arcy Farm" method, has been sold in New York for some time. The price is twenty cents per quart jar, and as it insures just as pure milk as the cow can give, the plan suits wealthy customers very well, while it is said to be quite remunerative to the Farm supply-George II. died of rupture of the heart, ing it. The glass jars or any nice packages which the periodicals of that day termed a not only are an assurance of the purity of the contents but when such pains are taken in George, III. died as he had lived a mad the marketing the buyer may be reasonably man. Throughout life he was at least a con- sure of good feed, proper care and neatness at sistent monarch.

the farm. Such efforts always pay, under proper management in product on and

FINANOIAL.

COMMERCIAL.

The flour market is doing but little, and it is expected that the present stagnation will last until the middle of next February. The stock in store to-day is over 46,000 barrels, an increase of over 5,000 barrels since the beginning of the month. The following is a statement of the quantity of flour inspected at Montreal for the last week:—

t week:-	Brls.
Superior Extra. Extra Superine. Spring Extra.	 178 301 846
Rejected	

FLOUR.—Market continues inactive. Sales are only of a local character and consist of broken lots of Spring Extra and Medium Bakers' at quotations.

Receipts per Grand Trunk Railway 600 barrels. Corn Exchange Report.

Chicago Markets.

Chicago Merrets.

Chicago, December 17.—Wheat—Recoipts, 115,000 bushels; slipments, 105,000 bushels; slipments, 105,000 bushels; slipments, 140,000 bushels; slipments, 140,000 bushels; slipments, 140,000 bushels; slipments, 140,000 bushels; slipe for January; 37.72] for February. Pork, \$7.82] for January; \$7.72] for February. Lard, \$5.50 for January; \$5.60 for February.

New York Markets. NEW YORK, December 17.—Cotton dull at \$15-16c.

8 la-16e.
Flour slightly in buyers' favor; receipts, 16,000 barrels; sates, 14,000 barrels.

Pork quiet and unchanged.
Lard dull.
Cheese 3c to 9c.

Tara dun. Cheese Se to Se. Petroleum—Crude, 73c to 83c; Refined, 83c. Chicago Hog Market.

CHICAGO, December 17.—Hors—Recelpts, 29,500; light, \$2.50 to 2.60; mixed packers', \$2.50 to 2.85; heavy shipping, \$2.65 to 2.90.

THE CATTLE MARKETS.

The late arrivals of cattle at this market have been of an inferior quality. Sales were consequently slow and without profit to the owner. In fact traders seem to wait, expecting the advent of a superior stock the end of this week for Xmas purposes. The Quebec butchers are ahead to-day in buying up cattle at from 5c to 6c per lb. Good common steers sell at from ac to 5c per lb; Fat cows at from 3c to 4c; Lean and inferior from 2c to 5c per lb. Mr. Tozer, of Quebec, Mr. Knox, of Oshawa, Mr. Rogers, of Toronto, were among the principal buyers of cattle, at an average price of 5c the pound.

The Viger Cattle Market

The Viger Cattle Market The Viger Cattle Market
has been but poorly patronized of late owing to
the severity of the weather. About 130 head of
small cattle were offered for safe, the greater
part being sold at from \$7.00 to 20.00 each. Severallarge and good steers and heiters were on
hand from the United States, and presented a
prime appearance. The owners of these cattle,
Messrs, Hopper and Benallack, are shipping 100
head of very choice western cattle on the steamship "Brooklyn," which sails from Portland to
Liverpool next Saturday. This firm is doing a
large business in this respect and with great
profit.

The Hog Market.

Chleago as usual supplies this article. Prices are, however, declining, being from \$5.50 to 3.75 per 110 lbs. Dressed hogs, by ear lots, at from \$4.00 to 4.75 per 100 lbs.

Prize Cattle in Montreal.

About a dozen prize cattle from Chicago stood in Victoria square this afternoon. They are splendid beasts, and four of them are to be shipped to the United Kingdom for schibition there. They are expected, with what truth it is hard to say, to beat anything in that region in the line of stock. They belong to Messrs. Hopper & Benalinek, of Bleury street. These gentlemen possess 113 of the same sort, the pick of the herds of the West.

City Retail Markets.

The present snow has added materially to the attendance of our country farmers, and this morning innumerable sleighs were to be seen, loaded up to the top with produce and provisions

of all kinds. of all kinds.

VEGETABLES—Were poorly supplied but in good demand, at about the same prices as last market. Potatoes from 75c to \$1.50 per bag. Cabbages, 20c per dozen. Carrots, parsnips and tur-

12c do.

BUTCHERS' MEAT.—A plentiful supply of ment
on hand, but small call. Dressed hogs in car lots
at \$1 to 4.75; pork, 5c to 7c per pound; beef, 4c
per pound, by the quarter; mutton, the same.
EGGS—Are plentiful, and sell at from 22c to
7c the degen EGGS—Are plenthut, and sen at from 220 to 27c the dozen.

Grain.—The supply is good, and prices without fluctuations. Oats, 75c to 80c per bag; peas, 75c to 85c per bushel; beans, \$1.20 to 1.00 per bushel.

MAPLE SUGAR—Sells at 8c the pound. A good quantity has been shipred of late for the old country.

country.

MESS PORK—At from \$11.00 to 12.00 the barrel.

LARD—At from Sc to 10 per pound.

THE HAYMARKET.—The present supply equals the demand, about one inudred and lifty londs. Hay sells at from \$3.00 to 10.00 per 100 bundles of 15 pounds. Straw sells at from \$4.50 to 7.00 per 100 bundles of 12 pounds.

Immense quantities of crystal-coloured head embroideries appear on the handsomest imported evening and full-dress toilets.

From January, 1876, till May last, twenty-three dead bodies have been cremated in the city of Milan, one of them that of a woman. Four bodies, ascertained to be of the weight of 63, 62 41, and 59 kilogrammes, have yielded ashes to the weight of between two and three kilogrammes. A kilogramme is about two and one-lifth pounds.

Effects of Old Age.-When a horse is twenty years old, he may be expected to show the effects of old age. These frequently appear in weakness of the bladder, and incontinence of urine, as well as in weakness of the loins; due often to partial failure of the nervous system proceeding from the spinal cord. Relief may perhaps be found in applying mustard to the loins, or between the thighs below the tail. Two grains of
