

America are under deep obligations to the publishers for having undertaken the reproduction in this country of such a costly work as this. One cannot read a single chapter without being impressed with the care which the author has bestowed upon it. Apparently, nothing that is known up to the present year concerning vital processes has escaped his painstaking attention; no matter how trivial the details, they receive the fullest consideration. The additions which have been made to this last edition are caused, not by any attempt to enlarge the scope of the work, but by an effort to explain more fully and at greater length what seemed to be the most fundamental and important topics. The publishers have subjected it to the searching revision of one of the foremost American professors of Physiology, but the American editor, we are glad to see, has not abused his right to make additions, there being very few sentences in brackets, but he has added a considerable number of illustrations, which greatly help to explain the text. He would be a bold critic who would venture to find fault with the work of the distinguished Cambridge professor, and for our own part we have nothing but words of the highest praise for the classical and thorough manner in which the work is written, as well as for the liberality of the publishers for selling such a large work, and one which must necessarily be very costly to produce, for the extremely moderate price mentioned above. The same work can only be purchased by the student in England in five volumes, costing three times as much as the American edition. That the students of America have appreciated the enterprise of the Lea Brothers is evidenced by their having rapidly exhausted four editions, and still called for a fifth one now before them.

Lea Brothers & Co. are evidently determined to maintain the lead which they have held long as the principal *text-book* publishers of America. The book may be obtained from any bookseller.

ANATOMY, DESCRIPTIVE AND SURGICAL. By Henry Gray, F.R.S., Lecturer on Anatomy at St. George's Hospital, London. New American from the thirteenth enlarged and improved English edition. Edited by T. Pickering Pick, F.R.C.S., Examiner in Anatomy, Royal College of Surgeons of England. In one imperial octavo volume of 1100 pages, with 635 large engravings. Price with illustrations in colors: Cloth, \$7.00; leather, \$8.00. Price with illustrations in black: Cloth, \$6.00; leather, \$7.00. Philadelphia: LEA BROTHERS & Co., 1893.

We feel safe in saying that no Medical work has ever had so large and attentive a circle of readers as has the above.

Since 1857 Gray's Anatomy has unquestionably been the standard text-book on its subject among all English-speaking people. The demand for thirteen editions has been utilized by subjecting the work to the searching revision of the foremost anatomists of a generation. In no other way is accuracy and completeness to be attained in treating of so complex and detailed a science. The series of illustrations is quite as famous as the text. Their large size not only enables the various parts to be brought into view, but also allows their names to be engraved directly upon them. Thus not only the name, but the extent of a part is indicated at a glance,—a matter of obvious importance and convenience. Many new illustrations appear in this edition, and the whole series has been re-engraved wherever clearness could be promoted. The liberal use of colors lends added prominence to the attachments of muscles, to veins, arteries and nerves. The work is also published with illustrations in black alone.

As heretofore, the revision has been most thoroughly performed, so that the work is kept always abreast with the advances of its science. Special attention has been paid to the applications of anatomy to surgery, and the work is therefore indispensable to all who find in the exigencies of practice the need of recalling the details of the dissecting room.

One other special advantage which may be claimed for this edition is that it has been published in this country exactly as it appeared from the hands of the English editors, and is not therefore defaced by notes and comments of an American one. Gray's Anatomy has reached such a point of eminence and excellence that no other work can take its place, and it is doubtful if any other work will ever supplant it. As more and more stress is laid upon the importance of making anatomy the foundation of surgery, the medical student of the future will probably devote more and more time to his Gray, so that the volume will become indispensable to every Medical student. The volume before us is a great improvement on any other edition we have ever seen, and will no doubt meet with the ready sale which it deserves.

SURGERY. By Bern B. Gallaudet, M.D., Demonstrator of Anatomy and Clinical Lecturer on Surgery, College of Physicians and Surgeons, New York; Visiting Surgeon, Bellevue Hospital, New York; and Charles N. Dixon-Jones, M.D., Assistant Surgeon, Out-Patient Department, Presbyterian Hospital, New York. Being the final volume of The Students' Quiz Series, edited by Bern B. Gallaudet, M.D. Duodecimo, 291 pages, 149 illustrations. Cloth, \$1.75. Philadelphia: LEA BROTHERS & Co., 1893.
