THE APPLETON SCHOOL BOOKS.

JUST PUBLISHED.

Arithmetics.

In Three Books. By J. W. A. YOUNG, Ph.D., Assistant Professor of the Pedagogy of Mathematics in the University of Chicago, and LAMBERT LEWIS JACKSON, A.M., Head of Department of Mathematics, State Normal School, Brockport, New York.

Book I. For third and fourth years. Book II. For fifth and sixth years. Book III. For seventh and eighth years.

12mo. Cloth. Book I, 35 cents; Book II, 40 cents; Book III, 40 cents; Books II and III, combined, 65 cents.

These books represent a new departure in the teaching of arithmetic. Perhaps nine-tenths of all the elementary arithmetics published in

America during the last twenty years have been largely inspired by the Grube idea. But educators are now advancing such views as the following: "Avoid the interest-killing monotony of the Grube grind on the three hundred and odd combinations of half a dozen numbers which thus substitute sheer mechanical action for the spontaneous activity that simultaneously develops numerical ideas and the power to retain them." Young and Jackson's Arithmetics favor the Tanck-Knilling plan of counting or the *natural* method of learning number.

The Young and Jackson books use a series of steps by grades which enlar a number field gradually and admit of a systematic development series.

ing and Jackson Arithmetics make the logic of arithmetic the bac bone of the subject; treating definitions, principles, and processes inductively, but formally and systematically.

In the treatment of problems these books are unique. A topical treatment lends itself readily to correlation, and the authors of these books have drawn upon the best of geography, drawing, manual training, and nature study. The introduction of this material in its quantitative aspect is the newest and strongest feature of modern arithmetic.

The Young and Jackson Arithmetics contain a simple but formal treatment of concrete geometry graded to correspond to the pupil's needs from the th' ear to the eighth.

These books provide a chapter on formal algebra in the eighth year's work, but the simple equation and literal quantities in the form of abbreviations are used from the fifth year. This gradual introduction of the algebraic notation leads easily to formal algebra.
