

GRAIN PRESSURE TESTS, No. 7B.

Wheat.—Square Wooden Bin.—Side Pressure Tests.

Size of Bin 12" x 12" x 6' 6" high.

Smooth Boards.

Diaphragm on bottom, size 12" x 12"=144 sq. inches.

Wheat 50 lbs. per cu. ft., equal to 62.2 lbs. per bushel.

First section of grain column in Bin 12" high covering face of diaphragm weight 50 lbs.; combined area of four sides=576 sq. in. all following sections=4.80 inches high, weighing 20 lbs. area of four sides=230.4 square inches.

Grain weighed into bin. lbs.	Height of grain column ins.	Equivalent fluid pressure. water.	Pressure of grain on diaphragm. ins. lbs. per water.	Side pressure per section. lbs.	Grain running out, pressure of grain on diaphragm.	
					ins.	lbs. per water.

Total side pressure. 687.108

RELATIVE VERTICAL AND LATERAL PRESSURE.

(See Test No. 7A.) Pressure on bottom of bin 9 $\frac{1}{4}$ " water = 0.35178 lbs. per sq. in. \times area of diaphragm 144 sq. inches = 50.656 lbs.Maximum pressure on sides when grain at rest = 5 $\frac{1}{2}$ " water = .21197 lbs. per sq. inch.

Vertical pressure = 0.35178

 $\frac{\text{Vertical pressure}}{\text{Vertical pressure} + \text{Lateral pressure}}$ = 60 % of vertical pressure, or vertical

Lateral pressure = 0.21197 pressure = 1.67 % of lateral pressure.

Co-efficient of friction Weight carried by sides = 274.344 lbs.

between $\frac{\text{Weight carried by sides}}{\text{Vertical pressure}}$ = 0.397

Wheat and sides of bin Total side pressure = 687.108 lbs.

GRAIN IN MOTION :—

Grain running out of bin at rate of 120 lbs. per minute through opening in centre of hopper bottom, maximum pressure 6 $\frac{5}{8}$ " water, equals 0.22775 lbs. per square inch = 9.3 % increase of pressure due to grain in motion.
