

Yes, Sir! Clarke's gloves are by far the best on the market to-day.

Couldn't very well be otherwise.

Best quality skins, tanned in our own tannery and made up in our own factory. Not a step in the making that's not watched over by our eagle-eyed inspectors. Perfectly finished to the smallest stitch.

Take our "Horsehide" Gloves, for example.

Real horsehide, remember—not cowhide.

Feel the soft, pliable skins. Note how neat and comfortable on the hands.

Beats all how long they'll wear—think they were iron.

Guarantee them to be heat and wet proof. Stand scalding and scorching without getting hard.

Look for Clarke's stamp on the gloves you buy, and make sure of best value for your money.

W. HOULTON, Broadfield Farm, Northleach, Glos. ENGLAND; or S. HOULTON, Calgary, ALBERTA, Canadian representative.

QUESTIONS AND ANSWERS. Veterinary.

LEAN HORSE.

I bought a horse that has been poorly fed for a couple of years. He is very thin. I can't get him to drink more than half a pailful of water once daily. What shall I feed him to make him gain in flesh fast? C. E. P.

Ans.—Have his teeth dressed, and feed on good hay and a little good oats, with a feed of bran, with half pint of linseed meal twice weekly, also give a carrot or two every day. Give regular exercise, and, as he gets stronger, give more exercise, and increase the grain allowance. Do not try to force him too rapidly, else you will probably cause digestive trouble. Keep salt before him all the time. You need not be alarmed about him drinking, he will drink when he is thirsty. V.

LEUCORRHEA.

Mare was bred on July 13th, and is in foal. She discharges a whitish-colored, thickish material from her vulva. A. R.

Ans.—She has a chronic disease of the womb called leucorrhoea, and it is not probable she is pregnant, as mares suffering from this trouble seldom conceive. The disease is very hard to treat, and recovery usually very slow. If she is in foal, treatment will cause abortion. The womb should be flushed out about every third day with about two gallons of a two-per-cent. solution of creolin heated to 100 degrees, Fahr., and introduced with an injection pump or a large syringe with a long nozzle, and she should get 30 drops carbolic acid diluted with a pint of water and mixed with her food twice daily. Treatment should be continued until the discharge ceases. V.

UMBILICAL HERNIA—COW POX.

1. Spring colt has a rupture the size of a hen's egg at the navel. 2. Cows have sore teats. A slight elevation is first noticed, then it breaks, and a scab, with matter underneath, forms. D. C. M.

Ans.—1. Apply a truss or bandage with an elevation about the size of $\frac{1}{2}$ a baseball on it. Apply so that the elevation presses upon the rupture and keeps it pressed up into the abdomen. Arrange truss with straps or strings passing forward and attached to a strap around the colt's neck so as to prevent truss from slipping backwards. If this does not effect a cure, get your veterinarian to operate. Most veterinarians use a clam in cases that a truss will not cure. In many cases, nature effects a cure, and it would probably be wise to leave it alone until cold weather, and then, if necessary, treat.

2. This is cow pox, and is contagious. The person who milks the diseased cows should not milk the non-affected. Cure is usually slow. Make an ointment of 4 drams boracic acid, 20 drops carbolic acid, and 2 ounces vaseline. Dress the teats twice daily with this. If the teats become very sore, use a teat-syphon to milk. V.

HEAVES—SPAVIN.

1. Horse has been sick since May. He breathes very heavy, and makes a wheezing noise; when excited, he coughs; has poor appetite, and is very weak. 2. Can the lameness of a spavin of three years' standing be cured? D. H. T.

Ans.—1. This is evidently a severe case of heaves, and while the symptoms may be somewhat relieved, a cure cannot be effected. Feed on first-class food only. Give small quantities of first-class timothy hay, and give good clean rolled oats. Dampen all he eats with lime water. If he gains strength enough to work a little, feed liberally on grain and a little bulky food. In addition, give every morning a ball composed of 2 drams solid extract of belladonna, 1 dram powdered opium, and 1 dram camphor, with sufficient oil of tar to make plastic. Roll in tissue paper, and administer, or mix with 1 pint cold water, and give as a drench.

2. Some such cases cannot be cured, but many can. Firing and blistering is the proper treatment, and this can be properly done only by a veterinarian. V.

USED UP AND TIRED OUT MEN AT THE OFFICE WOMEN IN THE HOME CHILDREN AT SCHOOL

Every day in the week and every week in the year men, women and children feel all used up and tired out.

The strain of business, the cares of home and social life and the task of study cause terrible suffering from heart and nerve troubles. The efforts put forth to keep up to the modern "high pressure" mode of life in this age soon wears out the strongest system, shatters the nerves and weakens the heart.

Thousands find life a burden and others an early grave. The strain on the system causes nervousness, palpitation of the heart, nervous prostration, sleeplessness, faint and dizzy spells, skip beats, weak and irregular pulse, smothering and sinking spells, etc. The blood becomes weak and watery and eventually causes decline.

Milburn's Heart and Nerve Pills

are indicated for all diseases arising from a weak and debilitated condition of the heart or of the nerve centres. Mrs. Thos. Hall, Keldon, Ont., writes: "For the past two or three years I have been troubled with nervousness and heart failure, and the doctors failed to give me any relief. I decided at last to give Milburn's Heart and Nerve Pills a trial, and I would not now be without them if they cost twice as much. I have recommended them to my neighbors and friends."

Milburn's Heart and Nerve Pills 50 cts. per box or 3 for \$1.25, all dealers, or The T. Milburn Co., Limited, Toronto, Ont.
