At this time especially can be seen the great need of a water supply for our the manufacture of ion through all its various stages before he can write about the manufacture of the can write about the manufacture of the can write about the second t town. If a fire should take place just it, and to gain such knowledge requires a glimpse of the now or while the present searcity of time, The manufacture of iron cannot water exists we do not see how it be learned in a day. would be possible to prevent the principal part of the town from burning

during such a time as this must be very unfit for drinking.

The Value of Irrigation.

The value of irrigation has received an unusual endorsement the past season, and the lesson taught by the experience gained may well be heeded. The American Agriculturist, with its usual clear-sightedness, in the of Eastern farmers especially. The advantages gained by irrigation are summed up by the American Agriculturist as follows : There is absolute contains fertilizing elements which increase the productiveness of the soil.

The Exhibition.

The time of opening the exhibition is rapidly drawing near, and from These comprise the product of the orehard, field and garden, as well as off successfully. If the fine weather continues a large number will no doubt attend and we believe that all who do so will be amply repaid. The farmer or artisan who spends a day and a perfect success throughout.

The Crops.

As the farming season draws to close and the husbandman gathers in the various crops of hay, grain, fruit and vegetables, the operations of the year prove to be abundantly successful. There has not been such a crop of hay harvested in the county for many years as was secured during the pres ent season. Although the dark and ent season. Although the dark and wet weather which prevailed during the last part of the haying season tended to injure some small portion of the corp, so large has been the increase in the erop over former years that the yield of oats on the contrary, which yield of oats on the contrary, which where the men were dumping the ore at the north of the on pond on rising promised so well in the carly part of these who work here—the charges, as the scason, has harvested badly. From they are called. Many crunot stand to be found the sight of the miller,
