Grand Council Representatives.—Dr. Geo. Hicks and W. E. Fitzgerald
Alternates.—Mrs. Robt. McNaughton and Mrs. W. E. Fitzgerald

The above named officers are to be installed at the next regular meeting to be held on Tuesday evening, January 13th, 1920, at which meeting a Grand Council officer and other distinguished members are expected to be present and refreshments provided and a social time spent.

HUMANIZE EDUCATION.

Famous Canadian Gives Advice to the English.

Very gently does Sir William Osler, the famous Canadian doctor, suggest to the members of the Oxford Classical Association that what their cult of the humanities needs chiefly is to be humanized. No man ever praised the Greeks more devoutly. "The name of Hellas stands no longer for the name of a race, but as the name of knowledge; or, as more tersely put by Maine, 'Except the blind forces of nature, nothing moves in this world that is not Greek in origin.'" Yet, though president of the classical association, it is as a scientist that he speaks to these humanists—as Regius, professor of medicine; and he thrusts his charge home with masterly skill. To them the humanities mean only history, literature and philosophy, to the Greeks science was of equal importance. And in its relation to the humanities the science of the Greeks has a very special meaning for the world of to-day.

What Osler says of "Greets," the world-famous school of literae humaniores, is doubly true of classical instruction in Canada. "The moving forces which have made the modern world are simply ignored. Yet they are all Hellenic, all part and parcel of the humanities in the true sense, and all of prime importance in modern education." To the student in Greets, Aristotle is known as author of the "Metaphysics," "Politics" and "Poetics," but not as a scientist. Yet, as was pointed out to Darwin and admitted by him, "the principle of natural selection" was shadowed forth by Aristotle. "In biology," says Osler, "Aristotle speaks for the first time the language of modern science, and indeed he seems to have been first and foremost a biologist; his natural history studies influenced profoundly his sociology, his psychology, and his philosophy." Studied scientifically "the problems of heredity, of sex, of nutrition, of growth, of adaptation and of the struggle for existence." Though encyclopedic in his interests, he was a specialist in embryology unrivalled for 2,000 years. His discovery of a "special mode of reproduction in one of the species of sharks" waited until the nineteenth century to be confirmed. Yet Osler searched the examination papers of the school of literae humaniores through the past decade and found no reference to Aristotle as a scientist. Other cases are almost as striking. Lactantius had views of "the origin of the world and the origin of man" which are up to date with the most modern thought; and his conception of "continuity in the workings of nature" are "unmatched among the ancients or moderns"; yet the fact is similarly ignored in the school of literae humaniores. The inevitable result is a failure to grasp what is fundamental in history and philosophy, man's relation to the primal force of humanity and to the universe.

There is another side to the picture, the professed scientist. "The extraordinary development of modern science may be her undoing. Specialism, now a necessity, has fragmented the specialties themselves. The worker loses all sense of proportion in a maze of minutiae. Applying themselves early to research, young men get into backwaters, far from the main stream. They quickly become hypercritical, and the smaller the field the greater the tendency to malocclusion. From over-specialization, scientific men are in a more parlous state than are the humanists from neglect of classical tradition. The salvation of science lies in a recognition of a new philosophy—the scientia scientiarum which Plato describes: 'Now, when all these studies reach the point of intercommunion and connection with one another, and come to be considered in their mutual affinities, then I think, and not till then, will the pursuit of them have value.'" Osler accordingly proposes a modified honor school in which the principles of philosophy are to be dealt with in relation to the sciences, and in which science is to be illumined by the introduction of literary and historical studies. "Science will take a totally different position in this country when the knowledge of its advances is the possession of all educated men."

Many minds are to-day moving toward a similar conception of the truly cultural education. As a satirist of modern classicism pointed out, the Greeks had not the slightest suspicion that they were ancients. In each passing century those who understand them best think of themselves most nearly as they thought of themselves when they walked and talked on the Akropolis. To us of to-day they are most modern when we follow their tentative observations in science, their inspired guesses as to the moving forces in this world machine, and eke them out with our fuller correlation of facts, our ever enlarging and solidifying theories as to man and his place in nature.

Good-bye to Asthma. Persons suffering from that extremely trying trouble known as asthma know what it is to long with all their hearts for escape as from a tyrant. Never do they know when an attack may come and they know that a struggle unaided is vain. With Dr. J. D. Kellogg's Asthma Remedy at hand, however, they can say good-bye to their enemy and enjoy life again. It helps at once.

These are Days of ACTION at Swift, Sons & Co.

THESE are lively days at SWIFT'S BIG XMAS STORE! The early shopper is surprised and delighted with the assortment of Christmas goods—and this is because our big stock is being reinforced every day by SPECIAL XMAS LINES. These we are putting in every department at prices that mean ACTION!
