

received a fair share of attention at the recent meeting of the Canadian Medical Association in Kingston.

A committee composed of representatives from the various provinces gave some consideration to the subject and submitted the following resolution which was unanimously adopted :

"The Committee appointed at the last meeting to look into the question of inter-provincial registration would beg to express their regret that by the system which at present obtains, a graduate in medicine entitled to practise in one Province is not free to exercise his functions in all the Provinces of this large but sparsely settled Dominion ;

"That this condition of things prevents the names of medical practitioners in this Dominion being placed on the British register, becoming thereby British Practitioners, which the Council of Medical Education of Great Britain has more than once signified its willingness to grant ;

"That with this end in view it is, therefore, most desirable that there should be a uniform standard of matriculation, a uniform standard of medical education, and a uniform method of examination for the whole Dominion.

"That to effect this purpose, the Secretary be instructed to communicate with the various Provincial Councils, before their next meeting, asking that each Council discuss the question, and, if possible, appoint one or more delegates to a Dominion Committee for the purpose of adjusting a suitable curriculum and carrying out the suggestions herein contained, and that such Committee be requested to forward their finding to each of the Provincial Councils and to the Secretary of this Association before the next annual meeting."

HOSPITAL REPORTS.

VICTORIA GENERAL HOSPITAL. EYE, EAR AND THROAT DEPARTMENT.

Case of Foreign Body in Windpipe.
Reported by DR. W. F. COGSWELL,
House Surgeon.

A. W., age 18, factory girl; admitted to hospital Oct. 16th, 1895. Previous history good; has not menstruated. Five weeks ago while eating some preserves she swallowed a piece of glass. "Felt the glass stick in the throat and took bread to wash it down." About a week after this she felt some irritation in trachea at about level of thyroid gland. This caused her to cough and expectoration was often streaked with blood. One week before coming to hospital she stopped work in factory on account of cough and spitting of blood. About seven o'clock on morning of
