31	Middling tides. [I. Martyr.	11 9	1 58	1 28	2 58

you must not too suddenly put them to the richer food, or they will be liable to several dangerous diseases. It rarely happens, however, that cattle purchased from rich lands, thrive well in poor soils; but, on the contrary, those from poorer farms do well on good land. The choice of neat cattle, therefore, for the stocking of farms, must, in a great degree, be regulated by the nature and quality of the soil intended to feed them on. Cut or Chaff your Hay, Straw, Corn tops, or blades, and even your Stalks with a Straw Cutter, and you will save a great proportion which is otherwise wasted or passed through the animal without contributing to its nourishment. One bushel of chaffed Hay at a mess, given in a trough, 3 times in 24 hours, is sufficient for a Horse, Ox, or Cow. A Horse or horned beast thrives more on 15 pounds thus given, than on 24 or 25 as commonly expended.
