.....	Buonaparte exiled to the Island of St. Helena	...
1816	Bombardment of the City, and Destruction of the Algerine Fleet	2

Potatoe Tops used as Fodder.—An excellent fodder for horned cattle may be collected from Potatoe Tops.—Reap off about two-thirds of the length of the potatoe tops, and dry them on mowing land in the usual way of hay-making. Several tons may be collected from an acre, and no damage to the potatoes, if taken as soon as they are ripe, and before the leaf begins much to fall.

To remove Warts or Corns.—Light a match well dipped in brimstone, and apply it to the corn or wart, so as to let some of the burning sulphur drop upon it; which will create some trifling pain, but will cause the wart or corn in a short time wholly to disappear.

Cure for a Whooping Cough.—Dissolve a scruple of Salt of Tartar, in a gill of water; add ten grains of cochineal, finely powdered; sweeten this with fine sugar; give to an infant the fourth part of a table spoonful, four times a day; to a child of two or three years of age, half a spoonful; and from four years and upwards, a spoonful may be taken.

Recipe for the Asthma.—Take of milk or gum ammoniac, 6x ounces; syrup of squills, four ounces; mix together—a spoonful to be taken four or five times every day, particularly every morning.

The following receipt has been used many years with success by an experienced farmer in Somersetshire.—To every acre of orchard, take a load of muck-straw, or oats raked from the grass fields; lay it in six or eight heaps, into which divide a pound of sulphur; choose a clear day to burn it, with a brisk air, and it will not only destroy the insect in the bod, but kill all worms and other insects that breed under the trees and bark.
