

Catbird, *Dumetella carolinensis* Linn.; rare; observed only twice, once at Opeongo Lake, and once at Island Lake.

Brown Thrasher, *Toxostoma rufum* Linn.; rare; one observed in Park at Joe Lake and two on outskirts of Park near South River and Egan Estate.

House Wren, *Troglodytes aëdon aëdon* Vieill.; common.

Winter Wren, *Nannus hiemalis hiemalis* Vieill.; abundant.

Brown Creeper, *Certhia familiaris americana* Bonap.; not common; nest seen once, at Canoe Lake, in bark of large dead hemlock in floodwater about three feet up from water level; at distance of about five yards heard its rather melodious song, a clear high-pitched whistle of five distinct notes, and first and third long, the other three short.

Red-breasted Nuthatch, *Sitta canadensis* Linn.; common.

Chickadee, *Penthestes atricapillus atricapillus* Linn.; common.

Golden-crowned Kinglet, *Regulus satrapa satrapa* Licht.; rare; seen only once, at Merchant's to White Trout Lake portage.

Wood Thrush, *Hylocichla mustelina* Gmel.; not common; never seen, but heard pretty clearly on several occasions; once when heard a half-breed at Manitou Lake with whom I was talking, at the time told me the bird had a 'red head.'

Veery, *Hylocichla fuscescens fuscescens* Steph.; fairly common.

Olive-backed Thrush, *Hylocichla ustulata swainsoni* Tschudi; abundant; nests.

Hermit Thrush, *Hylocichla guttata pallasi* Cab.; fairly common.

Robin, *Planesticus migratorius migratorius* Linn.; not common; nest.

Bluebird, *Sialia sialis sialis* Linn.; uncommon.

1. Mr. Bartlett, the Park Superintendent, has in his office a specimen of the Golden Eagle, *Aquila chrysaëtos*; the bird took wolf poison near Tea Lake (Big Tea in n. part of Park) the winter of 1908-9.

2. Mr. Waters, one of the older rangers, and a man who knows the Algonquin birds perhaps better than any one else, told me that the Great Horned Owl, *Bubo virginianus virginianus* Gmel. is found in the Park.

3. Dr. Claghorne, a former forest ranger, told me that he had seen the Baltimore Oriole, *Icterus galbula* Linn., near Cache Lake in the spring of 1911 and had found the Cliff Swallow, *Petrochelidon lunifrons lunifrons* Say, on the Madawaska River.

4. The Alder Flycatcher, *Empidonax traillii alnorum*, and the Yellow-bellied Flycatcher, *E. flaviventris*, probably both breed in the Park, but I have never been sufficiently sure of their songs and would not feel safe in identifying them in the bush.

5. *Mergus*, common, but whether *americanus* or *serrator* am uncertain. Oddly enough have never observed a male in the Park, though the female was seen nearly every day.
