PANOPEPTON

A Complete Food and Completely Available

Panopepton gives practical expression to the idea that in order to be of the widest utility a food for the sick should contain all the elements of the ordinary complex diet, should present in an *available* form the nitrogenous, carbohydrate and inorganic constituents essential to complete nutrition.

Panopepton also expresses the belief that a "balanced" ration is just as important for the sick as the well, and this food is rigidly standardised to a certain definite ratio of protein to carbohydrate. Of its 22% soluble solids, 6.30% is protein and 13% cereal carbohydrate, in genuine fortified Spanish Sherry wine.

Panopepton is derived from prime lean beef and whole wheat by physiological conversion, by the action of the natural digestive enzymes under conditions approximating as closely as possible to those of normal digestion, and presents in a form ready for immediate appropriation all the constituents that contribute to the repair and support of the body. It is a matter of daily observation by the clinician that this food proves peculiarly valuable as a conservator of energy and a promoter of functional activity.
