

TABLE: CATEGORIZATION OF NUCLEAR MATERIAL

Material	Form	Category I	Category II	Category III
1. Plutonium ^a	Unirradiated ^b	2 kg or more	Less than 2kg but more than 500 g	500 g or less ^c
2. Uranium-235	Unirradiated ^b :			
	- Uranium enriched to 20% 235U or more	5 kg or more	Less than 5 kg but more than 1 kg	1 kg or less ^c
	- Uranium enriched to 10% 235U but less than 20%	-	10 kg or more	Less than 10 kg ^c
	- Uranium enriched above natural, ^d but less than 10% 235U	-	-	10 kg or more
3. Uranium-233	Unirradiated ^b	2 kg or more	Less than 2 kg but more than 500 g	500 g or less ^c
4. Irradiated Fuel			Depleted or natural uranium, thorium or low enriched fuel (less than 10% fissile content) ^e	
a.	All plutonium except that with isotopic concentration exceeding 80% in plutonium -238.			
b.	Material not irradiated in a reactor or material irradiated in a reactor but with a radiation level equal to or less than 100 rads/hour at one meter unshielded.			
c.	Less than a radiologically significant quantity should be exempted.			
d.	Natural uranium, depleted uranium and thorium and quantities of uranium enriched to less than 10% not falling in Category III should be protected in accordance with prudent management practice.			
e.	Other fuel which by virtue of its original fissile material content is classified as Category I or II before irradiation may be reduced one category level when the radiation level from the fuel exceeds 100 rads/hour at one meter unshielded.
