☉ The column of the moon's southing gives the time of high water at Painsboro', Cornwallis, Horton, Hautsport, Winsor, Newport, Truro, &c.

Good management and system are equally necessary to success in farming. If farmers intend to "make money," they must keep up with the times, study their business, and adopt new implements and labor-saving machines. Old sayings, old maxims, and old tools are poor capital, and double the money would be made if greater liberality was used in management. We try to live by starving our business, and in turn get starved by it — a result which no reasonable man can find fault with. It is an old saying that "More corn grows on crooked rows than on straight" — and why? Because every body plants crooked rows. Now, still more would grow on straight ones if every body laid them straight. So, likewise, every farmer who ploughs straight furrows raises the largest crops. "Why so?" asks the reader. Because the man who takes pains to do things well is always most successful. Whoever will turn over straight and even furrows will do other things equally well; there is no slipshod farming about him — no broken fences, no giant weeds, no rickety tools, but all is neat and flourishing. Show me the style in which a man ploughs his fields, and I will tell you whether he is a good or bad farmer.
