

WOLF HOUND PLAYS WITH PUPS AS LAWYERS ARGUE OVER SPOTS

Actress Says They're Brown But Painted Black After Pet Disappeared.

New York, Aug. 17.—Chief interest in West Farms Court yesterday centered about the question as to whether Peggy's black spots are really black, or merely painted on her delicate hide.

Miss Hope Hampton, of 1145 Park Avenue, a motion picture actress, insists that the white Russian wolf-hound which she took from the collar of an apartment at 2141 Crotona Avenue is Peggy. Armand Paul, who lives at the Crotona Avenue address, contends that the dog is not Peggy, but one which he bought in Germany, and he wants the animal returned to him.

The seven puppies that are happily wagging their tails in Miss Hampton's apartment, not knowing what the fuss is all about, are also demanded by Armand.

Miss Hampton, who appeared in court accompanied by her attorney, Inman Paet, said she had purchased the hound at New Canaan, Conn., a year and a half ago. She told Magistrate Douglas that she released Peggy for a bit of exercise at Central Park one Sunday morning last winter, and that was the last seen of her \$1,000 pet. She offered a reward, advertised in the papers, and paid a private detective \$500 to try and find the dog, but without success.

A few days ago Miss Hampton said she learned that Peggy was in the cell of Paul's apartment and she went there with a warrant officer. She took the dog and the seven puppies she found there and had a summons served on Paul on a charge of unlawfully withholding her property.

Miss Hampton said the German dog referred to by Paul had been in the house for several weeks after its arrival in this country and had been marked with black spots and not brown spots, and that she could prove that some one had attempted to paint Peggy's spots black.

FOUNDERS' PROTEST FAILS; KABOTCHNICKS BEAR CABOTS

Philadelphia, Aug. 17.—Judge Audenried has granted the petition of Harry H. and Myrtle Kabotchnik to the conservation of forests in East Africa. A movement has recently been started by enthusiastic officers of the Forestry Department in Kenya, with the result that the "Watu Wa Miti" (men of the trees) are rapidly growing in number, says a special correspondent of "The London Times."

The petitioners, it was stated, had compiled in every way with the new law passed last year, and the court said he was constrained to grant the petitioners the right to use the name of Cabot, as "there apparently is nothing in the new law to stop any one using that or other famous names."

The reason we need more and more allies is because the world is still until he begins to demand decent wages.—La Grange (Ga.) Reporter.

1000 Eggs in Every Hen

New System of Poultry Keeping—Get Dollar a Dozen Eggs Next Winter—Famous Poultryman TELLS HOW

The great trouble with the poultry business has always been that the laying life of a hen was too short," says Henry Trafford, International Poultry Expert and Breeder, for nearly eighteen years Editor of Poultry Success.

The average pullet lays 150 eggs. If kept the second year, she may lay 100 more. Then she goes to market. It has been scientifically established that every pullet is born or hatched with over one thousand minute eggs germs in her system—and will lay them on a highly profitable basis over a period of four to six years' time if given proper care.

How to work to get 1,000 eggs from every hen; how to get pullets laying early; how to make the old hens lay pullets; how to keep up heavy egg production all through cold winter months when eggs are weak; triple egg production; make slacker hens bustle; \$5.00 profit from every hen in six winter months. These and many other money making poultry secrets are contained in Mr. Trafford's \$1.00 EGG HEN system of poultry raising, one copy of which will be sent absolutely free to any reader of this paper who keeps six hens or more.

Eggs should go to a dollar or more a dozen this coming winter. This means big profit to the poultry keeper who gets the eggs. Mr. Trafford tells how, if you keep chickens and want them to make money for you, cut out this ad. and send it with your name and address to Henry Trafford, Suite 621A, Herald Bldg., Binghamton, N. Y., and a free copy of "THE 1,000 EGG HEN" will be sent by return mail.

In Hospital

CHARLES H. JACKSON. His many friends in St. John will regret to learn of the illness of Charles H. Jackson, deputy chief of the St. John fire department. He was taken to the General Hospital yesterday.

American cotton is promised a through trip from New Orleans to practically all ports of Central Europe which have no seaports, and new tourists routes are to be opened up for excursion steamers which will rival the Rhine trip in beauty and historic interest and make it possible for winter tourists to reach the Alps and frequent changes from steamer to train.

The new waterway will touch the territory of nine states: Holland, Germany, France, Austria, Hungary, Serbia, Bulgaria, Czechoslovakia and Roumania. It really means a canal of continental Europe, as it will put all maritime powers in touch with the Black Sea through the Turkish straits in the Near East by way of the Black Sea.

If the canal attains the success its promoters prophesy it will drain much business through Rotterdam into the heart of Europe, and the Mediterranean Gibraltar into the Mediterranean. Much business which now finds its way into the Black Sea through the Turkish straits is also expected to enter the Black Sea through the mouths of the Danube.

Forest Conservation Is Combined With One-Good-Deed-A-Day Project.

London, July 25.—(By Mail).—The performance of at least one good deed each day has long been part of the Boy Scout creed. It is an idea which has been applied in a stranger manner to the conservation of forests in East Africa.

A movement has recently been started by enthusiastic officers of the Forestry Department in Kenya, with the result that the "Watu Wa Miti" (men of the trees) are rapidly growing in number, says a special correspondent of "The London Times."

The first Forest Scouts were recruited from the Kikuyu tribe, formerly known as the "Forest Destroyers," by reason of their methods of progressive agriculture. Until recently, whenever a member of the tribe wished to make a fresh shamba (cultivation) he went into the forest, cut down and burned the trees, and made a clearing in which to grow his maize. It was generally his custom to reap two or three crops, then discard this shamba and move on further into the forest, repeating the same process of destruction. As the method was continued vast areas became denuded of trees, hence the name "Forest Destroyers" applied to the tribe.

The Kenya native as yet, does not understand the agricultural value of crop rotation, but he does realize that when he needs a fresh shamba the easiest way to make it is to invade the virgin forest, cut down and burn the trees, and make a clearing in which to grow his maize. It was generally his custom to reap two or three crops, then discard this shamba and move on further into the forest, repeating the same process of destruction.

The organization known as the Watu Wa Miti has handed together thousands of the tribe, who have solemnly sworn before Ngai (the High God) to plant ten trees each year and to take care of trees everywhere. To this has been added the Scout idea of doing at least one good deed each day.

At first the "one good deed a day" idea was not readily understood by them, and often toward the evening thirty or forty members of the Forest Scouts would come to the house of the organizing secretary and would say: "Great White Chief, we have come to ask you to help us to think of a good deed in two hours the sun will set, and so far we have not been able to think of anything to do. Can you help us?" This little difficulty was overcome by starting a nursery close by the Forest Officer's house, where members were allowed to go and plant out a number of young trees. This act was allowed to count as a good deed, although at the same time the natives were told that it was not necessarily the best kind of good deed, and they must search their own hearts to find other things to do.

STOP! HAY FEVER Before It Commences

You can escape your yearly attack of Hay Fever by taking RAZ-MAH a week before the date it usually appears.

RAZ-MAH is a powder, contained in capsules, easily swallowed, harmless, yet rapid in its effect.

If you have Hay Fever has already commenced, start taking RAZ-MAH immediately. Thousands have had relief from RAZ-MAH. Your druggist will refund your money if a \$1.00 box does not bring relief. Get a box today. Templeton, Ltd., Toronto.

Proposal To Open Up Central Europe By New Waterway

Projected Plan Will Mean Revolution of World Transportation System.

Bamberg, Bavaria, July 25.—A. P. by mail.—Charlemagne would have a heart full of joy if he could come back to life long enough to see how canal-diggers are gashing up the eastern half of his old empire to connect the waters of the Rhine and Danube, and make it possible for ocean-going ships to travel from the North Sea to the Black Sea by inland waters.

The Rhine-Main-Danube Canal, which was begun in 1921, contemplates a revolution in the transportation system of central Europe, and promises the entire world. Freight routes will be changed, and cargoes loaded on ocean-going ships of 6,000 tons capacity will be able to sail from Rotterdam to Galata, at the mouth of the Danube, touching at Cologne, Cologne, Frankfurt, Nuremberg, Vienna, Budapest and Belgrade on their way to the Black Sea.

American cotton is promised a through trip from New Orleans to practically all ports of Central Europe which have no seaports, and new tourists routes are to be opened up for excursion steamers which will rival the Rhine trip in beauty and historic interest and make it possible for winter tourists to reach the Alps and frequent changes from steamer to train.

The new waterway will touch the territory of nine states: Holland, Germany, France, Austria, Hungary, Serbia, Bulgaria, Czechoslovakia and Roumania. It really means a canal of continental Europe, as it will put all maritime powers in touch with the Black Sea through the Turkish straits in the Near East by way of the Black Sea.

If the canal attains the success its promoters prophesy it will drain much business through Rotterdam into the heart of Europe, and the Mediterranean Gibraltar into the Mediterranean. Much business which now finds its way into the Black Sea through the Turkish straits is also expected to enter the Black Sea through the mouths of the Danube.

HOME REMEDIES OF OUR ANCESTORS

Almost every man and woman in America can remember the botanic recipes of our mothers and grandmothers for the treatment of ailments, and they were wonderfully dependable, too. Every ailment there stored away in the attic through the years in a tin can, catnip, sage, wormwood, rue, etc., for treating ills of the family during the winter months that followed. In 1873, Lydia E. Pinkham's Vegetable Compound was first prepared from one of these botanic remedies.

It has increased to such an extent that hundreds of tons of roots and herbs are now being raised in preparation. It has recently been proved that 98 out of every 100 women who try it find relief. It is a marvelous record for any medicine to hold.

ARCANUM ANNIVERSARY

The St. John Council No. 183 of the Royal Arcanum celebrated the forty-fifth anniversary of the organization of the Council at a dinner at the Hotel Hamilton last evening.

The party went out to Hampton by motor and both the trip and the banquet were most enjoyable. The Rev. W. H. Coleman, presided at the dinner and several addresses were given. The grand regent, G. S. Dyer, gave an interesting sketch of the history of the local council. Past grand regent, H. Porter, was heard in some witty remarks. Judge G. H. Hemmerson, the oldest member in point of years in the council, Commissioner R. Wigmore and E. C. Clawson also spoke to the members were accompanied by their ladies.

MOUNTAIN ASH BELIEVED TO BE ENDOWED WITH MAGICAL QUALITY

It is particularly in Scotland that the mountain ash is held to be endowed with mystical properties. But the tree is of equal repute as a lucky one in the Isle of Man, where it still will find people carrying bits of it in their pockets as a charm against evil spirits, writes "The Cleveland Plain Dealer."

Along the side of many a country road you may find a bush of mountain ash, an insignificant plant, with a spike of very small, pale, lilac-colored flowers. This is vervain, now or never, and it is the vervain in their hands which carried them to the altar. Later the Greek and Roman priests made equal use of vervain, while in the Middle Ages vervain had great reputation.

No doubt the herbalists of old are responsible for some of the queer beliefs about plants that still survive among us. The pretty eyebright, for instance, is occasionally used to make a wash for sore eyes, while sowbills are steeped to form a fluid for improving the complexion. The pink mallow again is of great repute as a lucky plant and a preservative against various ills.

SUES FOR BAIL SECURITY. Trustee for Community Finance Co. Seeks Return of \$150,000.

Baltimore, Aug. 17.—A petition has been filed in United States Court by Joseph S. Knapp Jr., trustee for the Community Finance Company, bankrupt "blind pool," for the recovery of \$150,000 in Liberty bonds furnished as security for bail in New York recently.

The bonds are alleged to have been sold to the National Fidelity and Surety Company, promoter of the company from customers. The security was given to the National Fidelity and Surety Company.

Judge Soper required the bonding company to show cause before tonight why it should not be restrained from disposing of the securities deposited with them by Montgomery.

According to the petition, the Community Finance Company failed with outstanding obligations of \$150,000.

DINOSAURS FOUND IN ALBERTA

Restoration of Ducky-billed Dinosaur Trachodon made by Mr. Knight under the supervision of Professor Osborn, includes the latest evidence as to the structure and characteristics of these animals, the character of the skin and their probable habits and environment.

THIS will introduce you to the Duck-billed Dinosaur Trachodon. Once upon a time, hundreds of thousands of years ago, these huge reptiles, fifty and even a hundred feet long, roamed the surface of the earth which is now by the Gulf of Mexico divided the continent and long before the age of man. We know not how they lived nor how they died, but we know that and where they lived and where they died.

A few of the tourists who travel east of Calgary across the open prairie, but that a few miles north, where the Red Deer River cuts down through these same level stretches, lies a valley known as the "Bad Lands." The abruptness with which the rangelands of the prairies are cleft by the huge deep canyon of the river is startling. Suddenly and sharply the flat tablelands fall away and one stands on the rim of a canyon and looks hundreds of feet below to the real danger of the river among myriad peaks and pyramids. Nor can anything more startling be imagined than the contrast between the smiling face of the prairie and the bleak, grotesque and inspiring desolation of the Bad Lands.

One dwelt the frightful Dinosaurs, the Tyrannosaurus, Gigantosaurus, Aukylousaurus and others; and each spring the rushing waters and shifting sands expose more remains of these prehistoric monsters. Numerous expeditions have been sent into the Bad Lands of Red Deer by the Government and by museums both in Canada and the United States, and Brooks on the Canadian Pacific Railway, about 110 miles east of Calgary, one sets out by motor for the Bad Lands, making the approach to the top of the towering cliffs from Dead Lodge Canyon or along the One-Tree Trail.

GAME NOT PLAYED; ARE NEGOTIATING

Many baseball fans were greatly disappointed last evening when they attended at the Rothsey diamond to see what was to have been the deciding game between Rothsey and Fair Vale for the Ellis River cup, to see only the Fair Vale team on hand to play.

The real danger of the Rothsey players, refused to take the game on the night of the 14th, and they were invited to Fair Vale, where the married and single men engaged in a six-inning contest, the bachelors emerging victorious.

Constant Vigil Kept In North Atlantic To Mark Ice Peril

Small icebergs, which drift along like ships offer Worst Danger.

London, June 8.—(By Mail).—This is the high season of 'growlers' in the Western ocean. A 'growler' in nautical language means a small iceberg, says "K. N. H." writing in "The London Daily Mail."

The icebergs begin to break away from the coast of Labrador in the first days of April, but they do not become a real danger to shipping until the early summer, when they split away from the ice fields in great numbers and in great bulk to be washed by the southerly currents toward the great ocean shipping tracks.

Last year icebergs and their more diminutive neighbors, 'growlers,' may be seen at intervals by ships crossing the Atlantic from Europe to New York and the St. Lawrence. It rarely happens that a vessel is allowed by the master to get within measurable distance of them, but they may often be seen through powerful glasses on the distant horizon.

They resemble the sails of a very spruce schooner, for in most cases they have several peaks which give them the appearance of sailing vessels. Generally they move in company, as a school, and before the discovery of wireless telegraphy, every crossing of the Atlantic was a wireless net, and each vessel in which they are moving is directed from shore stations.

Each day a special survey is made of the ocean from the coast of Labrador to the great Western ship route, and the results are reported to the various ice patrols—the International Ice Patrol, run by the United States government, and the Canadian Ice patrol.

"When the ice begins to move these patrols go out to report the position and condition of the moving icebergs. The ships used are very like large revenue cutters. They travel at good speed and are fitted with powerful wireless installations.

One of the grounds on which the objection is made, it is understood, is that the State Tax Department decided the building is not entitled to exemption, as the W. C. T. U. is not a charitable or religious organization, but one formed principally for the suppression of the liquor traffic. This objection having been attained by the passage of the Volstead Act, the organization now is "superfluous," it was contended.

The average luminous watch dial contains one millionth of a gram of radium.

Chef In Portland, Ore., Cooked For Ex-Kaiser

Can Tell a Few Stories About Former German Ruler; Son Fought in War.

Any one who has dined in the restaurant department of a hotel and store and has tasted the pastry served there has eaten food concocted by a chef who for over six years was an employe of Count Godard von Albenburg Bentinck at his Amerongen castle in Amerongen, Holland.

There is a large number of such streams between St. Andrews and the region beyond St. Martins, as well as the northern part of the province. If the salmon are not permitted to go into the streams, and deposit their spawn the fishery must die out.

The citizen told of one stream where it was alleged families got a supply of fish for winter by setting a stream and salting down the catch of salmon. He told of a number of other streams, but he was said to be untruthful, saying that net and spear and even pitfall made havoc among the fish. Even a hundred fish being taken out by one man were greatly exaggerated, he was told.

After the war it was to the Amerongen castle of Count Godard von Albenburg Bentinck that the Kaiser fled in exile. There he remained until June 14, when he moved to Dorn.

"I can remember," said Pyl, "when the daughter of the Count married her debut before the Queen of Holland at The Hague."

After the lease of a buffet supper was to be served, a sumptuous affair for which six turkeys had been especially raised and carlar had been brought from Russia by special messenger. The turkeys I dressed in a manner I have never seen in this country. After one of the birds was cooked its entire skin was taken off in one piece, the bird was then placed on a spit and the skin put back on again, when the bird was ready for the gorgeous decorations according to announcement.

Mr. Pyl is an American citizen. His son, Cornelius A. Pyl, twenty-four, was in the tank service during the war.

Electric System For Big Chicago Terminal

Chicago, Aug. 17.—(By A. P.)—A direct current twice as powerful as that of any other American electrification system is to be installed here by the Illinois Central railroad when it electrifies its terminal on the lake front, according to announcement of the organization representing the improvement of the system.

The New York Central and the Pennsylvania New York use a normal current of 600, it was stated, while the Chicago system will carry 1,200 volts.

Electrification will require a revolution of the terminal, the engineers say, which will mean the removal of the Illinois Central railroad when it electrifies its terminal on the lake front, according to announcement of the organization representing the improvement of the system.

The New York Central and the Pennsylvania New York use a normal current of 600, it was stated, while the Chicago system will carry 1,200 volts.

Electrically operated trains are far more economical than coal burning locomotives, according to the chief engineers. The coal can be consumed in power houses with big generators in a much more efficient way than when each locomotive must create its own power. To establish the system and to put it in operation, however, is infinitely more costly.

The electrically operated trains will travel at the rate of 37 miles an hour, according to the London Times, not including the time for stops.

EMPTIES AUTO'S GAS TANK TO FUEL THIEVES' ESCAPE

London, July 20.—(By mail).—At Manresa, a town about thirty-seven miles from Barcelona, a band of thieves rushed one of the leading bankers, writes a correspondent from Barcelona to the London Times. As few police and the thieves' task was simple.

It seems that five men hired a motor car at noon in order to go to Barcelona, offering a large sum as the price of hire. They then entered the bank and the leader held up the employees with a revolver. The manager, fortunately, was on the first floor and was able to call for help through a window. The thieves, finding that the alarm had been given, dropped their booty and ran toward their car, firing at the unarmed crowd as they ran.

The driver, realizing the object for which the car was being hired, rapidly emptied the petrol tank, thus rendering the motor useless to the thieves. Deprived of their peacocking getaways, the thieves fled to the hills and escaped to take to flight on foot under a hail of stones from the angry crowd. They were able to take cover in a neighboring forest and have not been captured.

All Saints' Church, Loch Lomond, of which Rev. C. W. Follett is pastor, held its annual picnic yesterday at Loch Lomond. The picnic was largely attended many people motored out from town. The weather was perfect and the day most enjoyable. Sports were held in the afternoon. Dinner and supper were served on the grounds. A large sun was realized for church purposes.

HEMORRHOIDS Do not suffer another day of itching, bleeding, or protruding piles or hemorrhoids. No surgical operation required. Dr. Chase's Hemorrhoid Relief, 60¢ a box, all drug stores. Sold by Dr. Chase & Co., United, Toronto, Hamilton, and Free.

ASSERTS POACHING MENAGES LIFE OF SALMON INDUSTRY

Says Net, Spear and Pitchfork Used to Catch Fish

A citizen who likes as a sportsman to cast an occasional fly for salmon but who as a business man realizes the need of protecting the salmon industry, declared to the Telegraph-Journal yesterday that there is far too much salmon poaching in the streams, large as some that enter the bay. Funds and other waters, and are the bane of salmon in spawning time.

There is a large number of such streams between St. Andrews and the region beyond St. Martins, as well as the northern part of the province. If the salmon are not permitted to go into the streams, and deposit their spawn the fishery must die out.

The citizen told of one stream where it was alleged families got a supply of fish for winter by setting a stream and salting down the catch of salmon. He told of a number of other streams, but he was said to be untruthful, saying that net and spear and even pitfall made havoc among the fish. Even a hundred fish being taken out by one man were greatly exaggerated, he was told.

After the war it was to the Amerongen castle of Count Godard von Albenburg Bentinck that the Kaiser fled in exile. There he remained until June 14, when he moved to Dorn.
